Identifying transcriptomic signatures that mediate the causal effect of genotype on Alzheimer's disease

J. Matthew Mahoney 2026-03-11 1 min 213 words FRONTIERS NEUROSCIENCE

Summary: The combined effects of thousands of genetic polymorphisms account for Alzheimer's disease (AD) genetic risk. Most AD polymorphisms affect gene expression. Thus, the transcriptome, the set of all gene expression levels for every gene in the genome, is a major mediator between the genotype to phenoty...

Exploring sex-related Biases in Deep Learning Models for Motor Imagery Brain-Computer Interfaces

Zorzet, B. J., Peterson, V., Milone, D. H., Echeveste, R.

2026-03-09 1 min 225 words

BIORXIV NEUROSCIENCE

Summary: Motor imagery (MI) brain-computer interfaces (BCIs) are promising technologies for neurorehabilitation. In this context, deep learning (DL) models are increasingly being used to decode the mental imagination of movement. However, countless studies across multiple domains have shown that DL models ar...

Combining automated patch clamp with optogenetics enables selective recording of DRG neurons subtypes

Vanoye, C. G., Ren, D., Belmadani, A., Malfait, A.-M., Miller, R. J., George, A. L.

2026-03-09

1 min 118 words

BIORXIV NEUROSCIENCE

Summary: Investigating the neurophysiology of nociception is aided by electrophysiological recording from dorsal root ganglion (DRG) neurons. Because DRG neurons are heterogeneous with overlapping electrophysiological properties, methods to distin-guish neuron subtypes are valuable for properly interpreting ...

Multi-omic profiling of human and mouse dorsal root ganglia enables targeted gene delivery to nociceptors

He, L. S., Bhatia, P., Bhuiyan, S. A., Semizoglou, E., Wang, J., Li, J., Nam, J., Luo, X. J., Arnhold, C., Zhu, D., Xu, M., Griesemer, D., Yong, H. J., Jayne, L., Gilmer, E., Li, Q., Pantaleo, K., Yang, L., Williams, E., Jayakar, S., Wainger, B., Hrvatin, S., Renthal, W.

2026-03-09 1 min 169 words BIORXIV NEUROSCIENCE

Summary: Chronic pain conditions are often driven by hyperexcitability of nociceptors, the peripheral sensory neurons that detect noxious stimuli. Recent single-cell transcriptomic studies have begun to clarify the molecular identity of distinct peripheral sensory neuron subtypes, but tools that restrict tra...

Genetic insights on the mechanisms of human cortical folding

Snyder, W. E., Shafee, R., Liu, S., Levitis, E., Duan, K., Kumar, K. E., Schleifer, C. H., Boen, R., Ching, C. R., Han, J. C., Lee, N., Mulle, J. G., Shultz, S., Jacquemont, S., Bearden, C. E., Vertes, P. E., Bullmore, E. T., Raznahan, A.

2026-03-09 1 min 144 words BIORXIV NEUROSCIENCE

Summary: The unique and intricate pattern of human cortical folding is rooted in fetal neurodevelopmental processes and can now be comprehensively quantified by new neuroimaging-derived measures of sulcal complexity. Here, we provide the first genetic maps of human sulcal complexity. Beginning with large eff...

Cell-type specific astrocyte activation is driven by cortical top-down modulation

Beiersdorfer, A., Losse, K., Bostel, J., Popp, J. S., Rotermund, N., Schulz, K., Droste, D., Gee, C. E., Hirnet, D., Lohr, C.

2026-03-09 1 min 191 words BIORXIV NEUROSCIENCE

Summary: Cortical projections to cortical and subcortical targets provide top-down modulation that shapes neuronal performance, including gain control and excitation-inhibition balance. However, the contribution of astrocytes to this process remains poorly understood. In the olfactory bulb, the first relay s...

A shared perceptual inference for cross-modally induced illusions of self-attribution.

📅 2022-08-25 📖 1 min 📝 184 words CLINICAL NEUROSCIENCE

Summary: The representation of our own body is malleable. Evidence indicates that multisensory stimulation can trigger an illusory sense of ownership over a fake hand, a partner's face, or a virtual body. Despite our understanding of the processes supporting the construction of bodily self, we know less abou...

Unmuting lucid dreams: Speech decoding and vocalization in real time.

📅 2023-03-13 📖 1 min 📝 260 words CLINICAL NEUROSCIENCE

Summary: Since the 1970s, scientists have been searching for ways to communicate with people in lucid dreams (LDs), during which it is possible to maintain consciousness. Previously, dreamers could hear sounds from reality and respond with some simple signals, but they could not speak back. In this study, fa...
