Protocol for modulating anesthesia delta oscillations using closed loop auditory stimulation

Catherine Duclos 2026-03-09 1 min 340 words FRONTIERS HUMAN NEUROSCIENCE

Summary: IntroductionDelta waves (0.1–4 Hz) are a hallmark of unconsciousness in both sleep and general anesthesia (GA). Closed-loop auditory stimulation (CLAS) delivers brief sounds phase-locked to ongoing slow oscillations and can modulate slow-wave activity (SWA) during sleep, but its efficacy and transla...

Extracellular stimulation and ephaptic coupling of neurons in a fully coupled finite element-based Extracellular—Membrane—Intracellular (EMI) model

Aslak Tveito 2026-02-12 1 min 298 words FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: IntroductionThe extracellular potential surrounding neurons is of great importance: it is measured to interpret neural activity, it underpins ephaptic coupling between neighboring cells, and it forms the basis for external stimulation of neural tissue. These phenomena have been studied for decades, ...

Tension shapes memory: computational insights into neural plasticity

👤 M. Taher A. Saif 📅 2026-02-11 📖 1 min 📝 182 words

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Mechanical forces have recently emerged as critical modulators of neural communication, yet their role in high-level cognitive functions remains poorly understood. Here, we present a biologically inspired spiking neural network model that integrates mechanical tension, vesicle dynamics, and spike-ti...

Simplified model of intrinsically bursting neurons

Bhattasali, N., Pinto, L., Lindsay, G. W.

2026-03-05 1 min 148 words

BIORXIV NEUROSCIENCE

Summary: Rhythmic neural activity underlies essential biological functions such as locomotion, breathing, and feeding. Computational models are widely used to study how such rhythms emerge from interactions between neuron-level and circuit-level dynamics. Intrinsically bursting neurons are key components of ...

NMDAR-mediated shift of neuronal gain across the cortical hierarchy

Lenninger, M., Herman, P. A., Skoglund, M., Kumar, A.

2026-03-04 1 min 209 words

BIORXIV NEUROSCIENCE

Summary: Neuronal gain is a critical feature of neuronal information processing, reflecting a cell's excitability in response to presynaptic inputs. Evidence from spine counts in non-human primates suggests that the number of presynaptic inputs increases across the cortical hierarchy. Therefore, understandin...

Dissociable frequency regimes in human temporal cortex integrate facial and acoustic cues during natural speech

Li, J., Bian, K., Hao, X., Wu, J., Lu, J., Li, Y.

2026-03-04 1 min 170 words

BIORXIV NEUROSCIENCE

Summary: Face-to-face communication relies on the seamless integration of visual and acoustic cues, yet the spatiotemporal principles governing how the human brain dynamically represents and combines these multisensory streams remain largely unresolved. To address this, we recorded high-density electrocortic...

Short-Term Variability Reveals Early Neural Mechanisms of Pain Chronification

Pantaleo, G., Ashworth, C., Jain, M., Mancini, F.

2026-03-04 1 min 212 words

BIORXIV NEUROSCIENCE

Summary: Short-term fluctuations in perceived pain are often dismissed as noise. However, evidence from diverse neural systems indicates that moment-to-moment variability reflects fundamental network properties such as stability and flexibility, and in pain, reduced short-term variability has been previously...

VRSPi: towards a neuroadaptive VR exposure therapy system for spider phobia

Kyriaki Kostoglou 2026-03-04 1 min 344 words FRONTIERS HUMAN NEUROSCIENCE

Summary: IntroductionArachnophobia, the fear of spiders, is one of the most common phobias globally that induce anxiety and other mental illnesses if left untreated. Virtual reality (VR)-based exposure therapy (VRET) has recently emerged as a viable solution for treating different phobias. In this work, we p...

Rhythms of life: melatonin, nutrition, sleep, and antioxidant strategies for healthy aging

Alina Crenguţa Nicolae 2026-03-04 1 min 240 words FRONTIERS NEUROSCIENCE

Summary: Circadian rhythms orchestrate nearly all physiological and behavioral functions, and their deterioration with aging contributes to sleep disruption, cognitive decline, and increased vulnerability to disease. Melatonin, the primary hormonal signal of darkness, plays a central role in maintaining circ...
