An ordinal Language of Thought supports human memory for regular sequences

👤 Tabbane, E., Figueira, S., Benjamin, L., Dehaene, S., Al Roumi, F. 📅 2026-05-15 📖 1 min

📝 194 words BIORXIV NEUROSCIENCE

Summary: How do humans store sequences that far exceed working memory capacity? Using visuo-spatial and binary auditory sequences, we previously showed that a Language of Thought (LoT) architecture, in which simple primitives are recursively combined into hierarchical programs, enables efficient storage of s...

🔗 **Read full article:** https://www.biorxiv.org/content/10.64898/2026.05.14.725160v1?rss=1

Word meaning, not surface statistics, is essential for predictive language processing

👤 Zyryanov, A., Pierz, V., Oganian, Y.

📅 2026-05-15 📖 1 min 📝 199 words

BIORXIV NEUROSCIENCE

Summary: Humans comprehend language incrementally, updating the representation of sentence meaning with each incoming word. These updates are guided by the distance between each perceived word and prior expectations--the prediction error. The alignment between large language models (LLMs) and cortical activi...

Spatially resolved transcriptomic identification of thousands of neurons recorded in vivo.

👤 Prankerd, I. H., Shinn, M. H., Shuker, P. C., Zhou, Z., Tilbury, R., Duffield, J. A. M., Maat, C. A., Nicoloutsopoulos, D., Ritoux, A., Maglio Cauhy, P. V., Orme, D., Bourdenx, M., Duff, K. E., Bugeon, S., Isogai, Y., Harris, K. D.

📅 2026-05-15 📖 1 min 📝 160 words BIORXIV NEUROSCIENCE

Summary: Transcriptomics has transformed our understanding of the brain, but assigning transcriptomic identities to neurons recorded in vivo remains challenging at scale. Existing platforms can pair transcriptomic identity with two-photon calcium imaging in small populations of approximately 100 neurons, but...

🔗 **Read full article:** https://www.biorxiv.org/content/10.64898/2026.05.15.725413v1?rss=1

Dendrite-soma interactions in cultured hippocampal neurons form non-random structural motifs with local presynaptic enrichment and strengthening

👤 Greiner, Y., Kurz, W., Dray, M., Lavi, G., Weiss, O. E., Baranes, D.

📅 2026-05-15 📖 1 min

📝 268 words

BIORXIV NEUROSCIENCE

Summary: Dendritic arbor morphology is shaped in part by interactions with neighboring dendrites, and its geometry strongly influences the spatial distribution and strength of synapses. These observations raise the possibility that local dendritic contacts help determine where synapses accumulate and strengt...

https://www.biorxiv.org/content/10.64898/2026.05.15.725585v1?rss=1

Pyramidal-cell-specific hemispheric asymmetry shapes dorsoventral CA1 dynamics during rest and exploratory behavior

👤 Kim, C. S., Banks, J., LAD, M., Kang, S. 📅 2026-05-16 📖 1 min 📝 207 words

BIORXIV NEUROSCIENCE

> **Summary:** The hippocampus is organized along dorsal-ventral and left-right axes, but whether and how these axes interact within defined neuronal populations across behavioral states remains unresolved. Here, we combined within-animal slice electrophysiology with dual-site fiber photometry to compare dorsal an...

Rapid connectivity alterations of thalamic nuclei during initial learning of goal-directed behaviour

👤 Jarrett, C., Fregni, S., Kriegstein, K. v., Ruge, H. 📅 2026-05-16 📖 1 min 📝 248 words

BIORXIV NEUROSCIENCE

> **Summary:** The thalamus is essential for learning, dynamically engaging with other subcortical and cerebral cortex regions throughout the learning process. Here, the thalamus serves as a critical connector hub and synchroniser within the thalamocortical system of the brain. However, whilst higher order thalami...

Sparse cortical dynamics reveal flexible condition-dependent spike-order codes

👤 Chen, G., Maass, W., Scherr, F. 📅 2026-05-15 📖 1 min 📝 183 words BIORXIV NEUROSCIENCE

Summary: Cortical networks compute with remarkably sparse spiking activity, yet the circuit mechanisms that organize these few spikes into flexible, condition-dependent temporal codes remain poorly understood. Here we combine analyses of large-scale mouse recordings with a data-driven cortical microcircuit m...

A dual EEG hyperscanning dataset of natural French face-to-face conversation

👤 Yamasaki, H., Blache, P., Schön, D. 📅 2026-05-15 📖 1 min 📝 145 words

BIORXIV NEUROSCIENCE

Summary: Conversation is a fundamental human behaviour that requires rapid coordination between speaking, listening, and turn-taking, yet datasets capturing its neural dynamics in natural interaction remain scarce. Hyperscanning EEG is particularly valuable for this purpose because it records both interlocut...

Just one moment: Unifying theories of consciousness based on a phenomenological “now” and temporal hierarchy.

📅 2024-04-04 📖 1 min 📝 216 words CLINICAL NEUROSCIENCE

Summary: A prevailing pessimism in the scientific study of consciousness is about it having too many theories. With theories of consciousness becoming increasingly isolated from each other, recently, several proposals have been put forth to cull the number of theories in contention. Here, building on a sugge...

Absolute pitch: A literature review of underlying factors, with special regard to music pedagogy.

📅 2023-07-10 📖 1 min 📝 202 words PSYCHOMUSICOLOGY

Summary: Absolute pitch (AP) is a fairly rare and special phenomenon that has relevance for musicology, psychology, genetics, and neuroscience. AP possessors are able to identify the pitch of an isolated sound or to produce that sound without a reference point. The authors' aim is to review the literature on...
