Striatal Cholinergic Interneurons Signal Aversion and Drive Avoidance

Zhou, Y., Tseng, H.-a., Xie, J., San Antonio, E., Ly, A., Malik, A., Fiorillo, C., Han, X.

2026-05-28

1
min

149
words

BIORXIV NEUROSCIENCE

Summary: Seeking reward and avoiding punishment are essential for survival. However, how the brain learns aversive value and generates avoidance remains poorly understood. We investigate acetylcholine-releasing striatal cholinergic interneurons (ChIs), which exhibit prominent excitation to salient behavioral...

Subcortical Shape Variations and Their Associations with Cognition Across the 8th Decade of Life. A Study in the Lothian Birth Cohort 1936

 Maria del C. Valdes-Hernandez, Wonjung Park, Joanna Moodie, Susana Muñoz Maniega, Janie Corley, Fraser N. Sneden, Mark E. Bastin, Joanna M. Wardlaw, Simon R. Cox, Jinah Park

 2026-05-29  1 min  174 words

ARXIV QBIO NC

Summary: arXiv:2605.29703v1 Announce Type: new Abstract: The study of brain morphology changes in normal individuals may capture aspects of functionally-relevant brain aging not fully indicated by gross volumetry. Despite the important role of subcortical brain structures in cognition, the associations betw...

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Neurorehabilitation poses a crucial problem in clinical recovery tasks, particularly for individuals with poor motor functions and neurological impairments, and problems in activities of daily living (ADL). To resolve this, we design a novel model, Rehab-DRLX, with a hybrid deep learning (HDL) frame...

A paradigm for skilled forelimb reaching by head-restrained mice

Chang, A., Madduri, A., Wallace, J. B., Wang, J., Reinhold, K.

2026-05-28

1 min

135 words

BIORXIV NEUROSCIENCE

Summary: Forelimb reaching tasks are widely used in neuroscience across species. In mice, pellet reaching is especially useful because it requires fine motor control. However, few automated pellet-delivery systems are well suited for head-restrained reaching, where pellet position must be highly consistent. ...

Cortical eigenmode coordinates provide compact subject-level signatures across structural MRI, resting-state fMRI, and EEG

 Park, H. G., Tarpey, T.

 2026-05-28  1 min

 207 words

BIORXIV NEUROSCIENCE

Summary: A practical barrier in multimodal neuroimaging is that structural MRI, fMRI, and EEG are often analyzed in modality-specific spaces or reduced to atlas- and sensor-based summaries, limiting the construction of common, interpretable subject-level brain signatures. We evaluate cortical Laplace-Beltram...

COGNITIVE NEUROSCIENCE

Summary: Attentional selectivity focuses on what is currently relevant. Relevance changes frequently in everyday life, triggering rapid reassignments of attentional priorities. Such reassignments are often not associated with behavioral changes and are thus difficult to assess objectively. Here, we measured ...

Spontaneous Spatial Mismatch Responses in the Sensory Cortex in Early Infancy

 2026-05-11  1 min  145 words

COGNITIVE NEUROSCIENCE

Summary: Whenever a perceived event violates expectations compared with an expected event, the cortical response to this event tends to be augmented. The increase in cortical responses signals a mismatch between expectation and observation. Mismatch patterns of neural activity have been repeatedly observed i...

Variable Processing Shifts during Perceptual Acceleration: Evidence from Temporal Integration

 2026-05-11  1 min  216 words

COGNITIVE NEUROSCIENCE

Summary: The perception of a stimulus can be accelerated by another that precedes it. Perceptual acceleration has been observed in a range of tasks, at varying timescales, and arises by virtue of providing advance spatial and/or temporal information about upcoming stimuli. Here, we examined perceptual accele...

NEUROPSYCHOLOGY

Summary: Objective: Cognitive dysfunction is a transdiagnostic feature of psychiatric disorders and a major contributor to functional and psychosocial disability. Despite its clinical importance, the structure and dynamics of cognitive dysfunction across psychiatric conditions remain unclear. Network analysi...

Examination of objective and subjective cognition and their association with functional outcomes: A cross-sectional study in a Canadian sample of homeless and precariously housed adults.

 2026-02-16  1 min  261 words

NEUROPSYCHOLOGY

Summary: Objective: Using a cross-sectional design, our aim was to examine whether objective and subjective cognition differentially relate to everyday functioning and quality of life in homeless and precariously housed adults. As an exploratory aim, we examined whether associations between cognition and out...

Financial competence, situation, and context of people with recent-onset psychosis: A comparison with matched controls and the role of cognition.

 2026-02-16  1 min  252 words

NEUROPSYCHOLOGY

Summary: Objective: People with a psychotic disorder often experience financial challenges. Financial competence problems might underlie these challenges, yet little is known about the extent and type of these problems, particularly in the recent-onset phase of psychosis. This study aimed to examine differen...

BIORXIV NEUROSCIENCE

Summary: Cerebral edema (CE) is a major determinant of poor outcomes after traumatic brain injury (TBI). CE affects approximately 60% of patients with mass lesions on head computed tomography (hCT) and confers a tenfold increase in mortality. Despite this burden, no validated biomarkers exist to identify pat...

words

BIORXIV NEUROSCIENCE

Summary: Duchenne muscular dystrophy (DMD) is a X-linked disorder caused by mutations in the DMD gene, which disrupts production of multiple isoforms of dystrophin in multiple organs namely muscle, heart and brain. While progressive muscle disease and cardiomyopathy are the hallmarks of DMD, over 40% of indi...

An image-computable characterization of the non-conditioned linkage of visual drive and valence in the primate amygdala

 Peter, A. S., Kim, G., DiCarlo, J.

 2026-05-26

 1 min

 205 words

BIORXIV NEUROSCIENCE

Summary: The amygdala is a key node in linking high-level representations of visual stimuli to affective state, and much research has focused on its role in learning artificial stimulus-value associations. By comparison, the primate amygdala's encoding of natural, non-conditioned visual stimuli is less well ...

Noninvasive Diagnostic Ultrasound-Guided Focused Ultrasound Enables Selective, Reversible Inhibition of Peripheral Nociceptive Fibers and Prevents Acute Pain

Sangwan, N., Mergelian, L., Klukinov, M., Mohammadjavadi, M., Navani, R., Pacharinsak, C., Pauly, K. B., Vilches-Moure, J. G., Yeomans, D. C., Anderson, T. A.

2026-05-26

1
min

324
words

BIORXIV NEUROSCIENCE

Summary: Background: Acute postoperative pain remains a major clinical therapeutic challenge. Current peripheral nerve blockade (PNB) techniques are effective for some patients but are limited by invasiveness, short duration, reliance on highly trained providers, and off-target motor and sensory effects. Foc...

Greater Amyloid Burden in Cognitive Networks in Preclinical Alzheimer's Disease

Nolin, S. A., Fountain-Zaragoza, S., Rieter, W. J., Jones, A., Nietert, P. J., Benitez, A.

2026-05-26

1
min

199
words

BIORXIV NEUROSCIENCE

Summary: Background: In preclinical Alzheimer's disease (pAD), regional patterns of amyloid- β ($A\beta$) deposition are well characterized but it is unclear how this process varies across functional networks. Objective: Determine how $A\beta$ accumulation in functional networks ("network-amyloid burden" [...

Gating effects of a Cav2.3 calcium channel mutation linked to developmental and epileptic encephalopathy

 Khousakoun, D., Souza, I. A., Ferron, L., Gandini, M. A., Zamponi,
G.

 2026-05-26  1
min

 249
words

BIORXIV NEUROSCIENCE

Summary: Developmental and epileptic encephalopathies (DEEs) are a group of neurological disorders primarily affecting young children and are characterized by severe seizures. DEEs are challenging to manage, with some patients experiencing severe side effects or not responding to frontline therapies. This is...

ARXIV QBIO NC

Summary: arXiv:2605.25224v1 Announce Type: new Abstract: Spiking neural networks (SNNs) can be used for implementing cost-efficient artificial intelligence computing or mechanistic modelling of experimentally observed neural data. In the latter, fitting neural data with recurrent SNNs (RSNNs) remains a chal...

Thalamic input drives co-timed excitation and inhibition to suppress cortical neuronal variability during movement initiation

 Ammer, J. J., Dacre, J., Schiemann, J., Moberg, S., Rochefort, N., Hennig, M., Duguid, I.

 2026-05-23  1 min  169 words

BIORXIV NEUROSCIENCE

Summary: Cortical activity is inherently dynamic, with ongoing fluctuations introducing variability into sensory-to-motor transformations. During movement initiation, neural variability in the motor cortex is sharply reduced, or 'quenched', a general phenomenon thought to ensure reliable population responses...

Dissociating volatility and stochasticity reveals transdiagnostic computational signatures of psychopathology

 Fang, X., Piray, P.

 2026-05-24  1 min  145 words

BIORXIV NEUROSCIENCE

Summary: Adaptive learning requires distinguishing volatility, changes in the latent state of the environment, from moment-to-moment stochasticity of observations. The two demand opposite adjustments to the learning rate: volatility calls for faster updating, stochasticity for slower. Disentangling them is c...

Obsessive-compulsive disorder and abstract sequence task contributions shift prefrontal cortical connectivity

Hyde, H., McLaughlin, N. C. R., Garnaat, S. L., Desrochers, T. M.

2026-05-23

1 min

361 words

BIORXIV NEUROSCIENCE

Summary: Obsessive-compulsive disorder (OCD) is characterized, in part, by repetitive, sequential behaviors, such as cleaning rituals, yet underlying neural circuitry related to abstract sequencing in OCD remains poorly understood. Prior work has implicated a set of cortical regions activated during abstract...

Layer 6 corticothalamic neurons show diverse and dynamic responses that support a role in cortical gain control in noisy environments

Kanold, P. O., Cardoso de Oliveira, M.

2026-05-23

1 min

149 words

BIORXIV NEUROSCIENCE

Summary: Listening in complex environments requires the enhancement of relevant sounds and suppression of irrelevant ones. Corticothalamic neurons (CTNs) in auditory cortex layer (L) 6 provide modulatory feedback to thalamic nuclei and to upper cortical layers and are thought to be involved in gain control. ...
