PIEZOs regulate oligodendrocyte sheath formation, expansion, and myelination potential

Coombs, A. M., Heo, D., Orlin, D. J., Call, C. L., Bechler, M. E., Murthy, S. E., Emery, B., Monk, K. R.

2026-04-25

1
min

150
words

BIORXIV NEUROSCIENCE

Summary: Myelination requires precise integration of physical cues by oligodendrocyte lineage cells (OLCs), but the molecular sensors that detect these cues remain incompletely understood. Here, we demonstrate that oligodendrocyte progenitor cells (OPCs) are sensitive to sub-micron changes in membrane displa...

Connections across regional glymphatic clearance, neural activity and amyloid- β deposition in cortex

Li, Y., Zhu, X., zhou, y., Zhang, X., Zhou, Z., Wei, K., Sun, J., Lou, M.

2026-04-25

1
min

204
words

BIORXIV NEUROSCIENCE

Summary: Neural activity inevitably produces waste, which promotes neurodegeneration with topographic features. The glymphatic system is important for waste clearance. However, the spatial characteristics of glymphatic clearance across cortex and whether it interplays with neural activity in contribution to ...

Stress-induced adaptations in nucleus accumbens dopamine D1 receptor-expressing cells correspond to social avoidance behavior in male mice

 Burek, D. J., Carlezon, W. A.

2026-04-24

1 min

201 words

BIORXIV NEUROSCIENCE

Summary: Stress can cause or exacerbate psychiatric illness, and effects on the transcription factor CREB within the nucleus accumbens (NAc) are critically involved. In rodents, stress-induced activation of NAc CREB produces elevations in dynorphin (DYN), an endogenous opioid expressed in dopamine D1-recepto...

Image-grounded encoding models reveal distinct temporal profiles of naturalistic object and scene processing in the human brain

 Mueller, N., Scholte, H. S., Groen, I. I. A.

2026-04-24

1 min

280 words

BIORXIV NEUROSCIENCE

Summary: The human brain processes large amounts of complex visual information in order to effectively interact with its environment. It is well established that our visual system has specialized regions to process incoming information efficiently, such as scene-, face-, and object-selective areas, which can...

Presynaptic CaV2.1 calcium dependent facilitation is essential for faithful auditory information transfer

Al-Yaari, M., Li, J., Keine, C., Hunger, B., Hansen, M. R., Young, S. M.

2026-04-24

1 min

147 words

BIORXIV NEUROSCIENCE

Summary: Activity-dependent modulation of presynaptic voltage-gated Ca²⁺ channels (CaV2) regulates Ca²⁺ influx to control neuronal circuit output. Although CaV2.1 can undergo robust Ca²⁺ dependent facilitation (CDF), whether it occurs in native central nervous system neuronal circuits is disputed. Accurate a...

BIORXIV NEUROSCIENCE

Summary: Internal neural representations can systematically deviate from externally measured sensory and behavioral variables, yet neuroscientists lack a principled statistical framework to quantify these mismatches. Here we introduce a nonlinear error-in-variables regression framework that explicitly models...

A multiverse analysis of stomach-brain coupling in humans

 Ngo, T. T. T., Hsu, T.-Y., Duncan, N. W.

 2026-04-24

 1 min

 166 words

BIORXIV NEUROSCIENCE

Summary: The gastric-brain axis is a burgeoning field of neuroscience; however, inferences from neuroimaging research are often constrained by the high dimensionality of methodological choices potentially leading to disparate outcomes. This study addresses such concerns by performing a multiverse analysis of...

Pre-stimulus Cortical State Modulates Dimension-Specific Attentional Capture

 Chen, S., Allenmark, F., Yu, H., Mueller, H. J., Shi, Z.

 2026-04-24

 1 min

 163 words

BIORXIV NEUROSCIENCE

Summary: Salient distractors capture attention, but whether momentary cortical state modulates capture, and whether this depends on attentional filtering routines, remains unclear. Using fMRI during visual search in human participants (N = 34), we examined how pre-stimulus global signal (GS) interacts with d...

Show HN: Browser Harness – Gives LLM freedom to complete any browser task

 gregpr07  2026-04-24  2 min  505 words

HACKER NEWS

Summary: <p>Hey HN,<p>We got tired of browser frameworks restricting the LLM, so we removed the framework and gave the LLM maximum freedom to do whatever it's trained on. We gave the harness the ability to self correct and add new tools if the LLM wants (is pre-trained on) that.<p>Our Browser Use library is ...

Hill-Type Models of Skeletal Muscle and Neuromuscular Actuators: A Systematic Review

 2025-09-12  1 min  200 words

REVIEWS BIOMEDICAL ENGINEERING

Summary: Backed by a century of research and development, Hill-type models of skeletal muscle, often including a muscle-tendon complex and neuromechanical interface, are widely used for countless applications. Lacking recent comprehensive reviews, the field of Hill-type modeling is, however, dense and hard-t...

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Echolocating big brown bats broadcast short, wideband ultrasonic FM pulses for foraging and navigation. These broadcasts contain frequencies from 100 to 20 kHz (wavelengths 0.34–1.7 cm). Bats perceive target distance by measuring the time delay between the outgoing pulse and the returning echo. Acui...

BIORXIV NEUROSCIENCE

Summary: Chronic pain presents a leading challenge in the world today for both clinicians and researchers. Because chronic pain is difficult to explain and treat, it is often managed with opioids despite providing limited relief and contributing to dependence and misuse. Persistent pain can be maintained by ...

PNAS NEUROSCIENCE

Summary: Proceedings of the National Academy of Sciences, Volume 123, Issue 16, April 2026.
Significance Radial glial (RG) cells are the principal neural progenitors of the developing cortex and form the structural scaffold that guides neuronal migration and cortical lamination. Here, we reveal that FAB...

Protocadherin 9 promotes cell survival of different bipolar subtypes in the developing mouse retina

 Mattos, M., Becerril, D., Guo, J., Gomez, C. C., Zuniga-Sanchez, E.

 2026-04-21  1
min

 248
words

BIORXIV NEUROSCIENCE

Summary: Neural circuit assembly relies on different neuronal subtypes coming together to form a functional circuit. The question of how the appropriate number of each subtype is integrated into an emerging circuit remains relatively unknown. To answer this question, we used the mouse retina to uncover the m...

Designing implicit population learners: a permutation-equivariant state space approach for brain disease diagnosis

 Chuan Yang  2026-03-27  1 min  299 words

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Introduction Group-aware learning has recently emerged as a promising paradigm for neuroimaging-based disease diagnosis, as population-level interactions can provide complementary information beyond individual imaging features. However, most existing approaches rely on explicitly constructed graphs, ...

Loss of autism-associated gene wac alters social behavior and identifies cho-1 as a modulator of cholinergic signaling in C. elegans

 Kim, D.-W., Boonpraman, N., Kuhn, N. C., Sammi, S. R.

 2026-04-21  1 min  228 words

BIORXIV NEUROSCIENCE

Summary: WAC is an autism-associated gene involved in neurodevelopment. However, the effects of reduced WAC function on behavior and synaptic regulation in vivo remain unclear. Taking cues from the previous studies on the wac gene and the C. elegans model of ASD, we elucidated the effects of wac gene deletio...

Zebrafish Functional Screening of FDA-Approved Drugs for Autosomal Dominant Retinitis Pigmentosa Caused by RHODOPSIN Q344X Mutation

 Wang, B., Ganzen, L., Coskun, E., James, R., Kha, T., Zhu, X., New, J. A., Tsujikawa, M., Leung, Y. F.

 2026-04-21  1 min  141 words

BIORXIV NEUROSCIENCE

Summary: Retinitis Pigmentosa (RP) is a group of inherited retinal degenerations for which most subtypes lack effective drug treatments. This challenge is particularly critical for autosomal dominant (ad) RP, which is often unsuitable for gene replacement therapy. To address this challenge, we screened an FD...

Novel visuomotor adaptation paradigm reveals a role of visual cortex in the plasticity of innate behaviors in mice

 Jones, E., Scanziani, M.

 17 2026-04-21  1 min

 267 words

BIORXIV NEUROSCIENCE

Summary: A long-standing hypothesis in sensory neuroscience suggests that the evolutionary expansion of cortex in mammals may contribute to sensory-dependent adaptation by acting on subcortical pathways that drive innate behavior. However, direct experimental evidence is lacking. Taking the visual system as ...

JOURNAL NEURAL ENGINEERING

Summary: Objective. High-frequency oscillations (HFOs) are a potential biomarker of the epileptogenic zone (EZ) in patients with focal epilepsy. Previous research has estimated that HFOs arise from regions as small as a single cortical column (1 mm³), making events difficult to detect with the coarse spatial...

Direct Assessment of Short-Latency Intracortical Inhibition via Immediate TMS-Evoked Potentials

Christiansen, L., Song, Y., Haagerup, D., Beck, M. M., Montemagno, K. T., Rothwell, J., Siebner, H. R.

2026-04-20

1
min255
words

BIORXIV NEUROSCIENCE

Summary: Short interval intracortical inhibition (SICI) is the most widely used neurophysiological index of GABAergic inhibition in the human cortex. However, it is an indirect measure, inferring synaptic inhibition from suppression of peripherally recorded motor evoked potentials (MEPs) elicited by transcranial magnetic stimulation (TMS).

BIORXIV NEUROSCIENCE

Summary: Motor neuron (MN) loss is a hallmark of neurodegenerative disorders, yet its assessment remains variable, confounding mechanistic and therapeutic interpretation. To address this, we conducted a systematic review and meta-analysis of spinal muscular atrophy (SMA) mouse studies, revealing 60% variabil...
