A Topological Fingerprint Encodes Motor Skill at Rest

Caporali, A., Betti, V., de Iure, D., Ferrazza, M., Antonelli, N., Sensi, S. L., Della Salda, L., Della Penna, S., de Pasquale, F.

2026-07-01 1 min 206 words

JOURNAL NEUROSCIENCE CURRENT

Summary: In this study, we investigated whether the architecture of brain interactions at rest maintains a representation of individual behavioral skills. Specifically, we aimed to identify a minimal set of topological features that capture an electrophysiological mechanism underlying the encoding of a mo...

Expression and Localization of NMDA Receptor GluN2 Subunits in Dorsal Horn Pain Circuits across Sex, Species, and Late Postnatal Development

Griffiths, K., Armstrong, J., Martin, N., Murray-Lawson, C., Oneil, E., David, L. S., Temi, S., Parnell, J., Rudyk, C., Bursey, J., Krajewski, J. L., McDermott, J. S., Dedek, A., Levine, A. J., Li, B., Tsai, E. C., Hildebrand, M. E.

2026-07-01 1 min 238 words

JOURNAL NEUROSCIENCE CURRENT

Summary: Despite being essential mediators of pain processing, the molecular identity of N-methyl-D-aspartate receptor (NMDAR) subtypes in nociceptive dorsal horn circuits is poorly understood, especially between sexes and in humans. Given the importance of GluN2 subunits in shaping NMDAR function ...

words

BIORXIV NEUROSCIENCE

Summary: Brain-computer interfaces (BCIs) offer a promising solution to speech loss due to neurological injury by decoding intended speech directly from brain activity. While recent BCIs have restored high-accuracy text-based communication, they fail to provide instantaneous voice output essential for the na...

Increased perceived effort during contralateral thermal heat pain is not explained by increased intracortical and corticospinal inhibition.

Monti, I., Bergevin, M., Murugavel Sangeetha, M., Thomas, M., Neva, J., Roy, M., Rainville, P., Pageaux, B.

2026-07-05 1 min 248 words

BIORXIV NEUROSCIENCE

Summary: Background. Pain influences motor function and has been proposed to reduce corticospinal and intracortical excitability. At the same time, performance can be maintained during pain, at the cost of increased perceived effort, a centrally generated signal reflecting resource engagement. Here, we teste...

A cellular midbrain mechanism for executing fast and reliable escape

Lefler, Y., Tan, Y. L., Ferreira, G., Fudge, A., Heffernan, M., Wang, Y., Branco, T.

2026-07-04

1

min

297

words

BIORXIV NEUROSCIENCE

Summary: Escape from threat is one of the most ancient and conserved sensorimotor transformations and must satisfy two competing demands. It must be fast and reliable, because failing to escape genuine threats risks death, yet also selective, because escaping indiscriminately costs energy and missed resource...

Chemogenetic inhibition of the noradrenergic locus coeruleus promotes the development of risk-taking decisional strategies and selectively enhances motor impulsivity in females

Chernoff, C. S., Hynes, T. J., Avramidis, D. K., Ramaiah, S., Lee, A. C., Khoshnevis, A., Hrelja, K. M., Winstanley, C. A.

2026-07-04 1 min 219 words

BIORXIV NEUROSCIENCE

Summary: The locus coeruleus noradrenaline (LC-NA) system is a key regulator of arousal, attention, and reward learning. Noradrenaline plays a critical role in impulse control, and recent evidence indicates the importance of noradrenaline signaling in cost-benefit decision making once choice strategies are e...

Dissociable structural and molecular pathways of age-related change in sustained attention

Subbulakshmi, S., Park, J., Julia Rathmann-Bloch, J., Ward, T., Cheng, G. L., Miller, D. S., Schwartz, S. T., Sheng, J., Tran, T. T., Sha, S. J., Deutsch, G., Trelle, A. N., Mormino, E. C., Wagner, A. D.

2026-07-03 2 min 431 words

BIORXIV NEUROSCIENCE

Summary: Sustained attention, the capacity to maintain goal-directed attention over extended periods, declines with age but with substantial individual variability across cognitively unimpaired (CU) older adults. The neurobiological mechanisms driving both the decline and its variability across CU remain poo...

Ligand-Specific Effects of 5-HT_{2A} Receptor Antagonists on Fear Extinction in C57BL/6J Mice: Comparative insights from MDL 11,939 and MDL 100,907

Tyulmenkova, A., Stackman, R.
W.

2026-07-03

1
min

261
words

BIORXIV NEUROSCIENCE

Summary: Serotonin (5-HT) 2A receptors (5-HT_{2AR}) modulate corticolimbic circuits regulating fear extinction. Although activation of these receptors has been shown to facilitate fear extinction, the behavioral consequences of 5-HT_{2AR} antagonism during extinction is not well defined. Here, we examined the syst...

Digital maze test reveals cognitive performance patterns associated with amyloid- β and tau.

2026-04-16

1
min277
words

NEUROPSYCHOLOGY

Summary: Objective: Digital cognitive tools provide novel ways to examine subtle cognitive processes not captured with traditional measures. This is particularly useful in examining subtle cognitive changes in early Alzheimer's disease (AD) stages. Here, we evaluate a digital maze test and its association to...

2026-07-03

1
min

183
words

ARXIV CS HC

Summary: arXiv:2607.01506v1 Announce Type: new Abstract: As Artificial Intelligence (AI)-based technologies have been integrated into school classrooms where multiple stakeholders (with different roles) interact with each other, it is critical to deeply understand stakeholder views in the classroom. In part...

Cognitive Color Coding: Chromatic Tuning Underlying Numerosity Adaptation - Experimental and Factor-Analytic Evidence from Individual Differences

Peterzell, D. H., Arrighi, R., Di Cesare, C., Gurioli, M., Farini, a., Grasso, P. A.

2026-07-02

1
min

243
words

BIORXIV NEUROSCIENCE

Summary: Numerosity adaptation (the underestimation of number after exposure to a numerous adaptor) is reduced when adaptor and test differ in color, suggesting that the numerosity system parses items into color-defined categories. Here we ask whether this chromatic selectivity is organized into multiple nar...

PNAS NEUROSCIENCE

Summary: Proceedings of the National Academy of Sciences, Volume 123, Issue 27, July 2026. Proficiency testing is widely used to assess expertise in medicine, engineering, and other high-stakes fields. In forensic science, such tests are often cited in court as evidence that pattern-comparison methods ...

FRONTIERS NEUROBOTICS

Summary: Background Detecting densely distributed small objects in unmanned aerial vehicle (UAV) aerial imagery poses a persistent challenge in computer vision. Vision Transformers (ViTs), empowered by global self-attention, perform strongly in object detection, but their fixed absolute positional encoding (P...

FRONTIERS NEUROBOTICS

Summary: Introduction Bimanual visuomotor imitation learning enables robots to acquire coordinated dual-arm manipulation skills from visual demonstrations, yet it faces significant challenges in temporal synchronization, spatial collision avoidance, long-horizon reasoning, and robustness to visual distraction...

JOURNAL NEURAL ENGINEERING

Summary: Objective. The human brain consists of multiple interacting neuronal networks that interleave at fine spatial and temporal scales. This complexity presents a challenge for scalp EEG and other noninvasive mapping techniques to accurately identify seizures and abnormal current patterns from background...

BIORXIV NEUROSCIENCE

Summary: The NGF/TrkA signaling axis is a central mediator of inflammatory and chronic pain, where injury-induced NGF binds and activates TrkA on nociceptive neurons to drive peripheral sensitization and persistent pain states. Despite its therapeutic promise, targeting this pathway is limited by adverse eff...
