The ALS/FTD-linked protein CHCHD10 associates with the TDP-43 C-terminal domain through a CHCH-helix interface

Alarcon-Morales, K. S., Pozo, S., Aguilera-Toste, M., Martin-Ramos, S., Muguruza, C., Garcia, R. D., Millet, O., Bernardo-Seisdedos, G.

2026-08-06 1 min 237 words

BIORXIV NEUROSCIENCE

Summary: Aggregation and cytoplasmic mislocalization of TDP-43 are defining features of several neurodegenerative disorders including Amyotrophic Lateral Sclerosis (ALS) and frontotemporal dementia (FTD). Yet the molecular interactions that regulate its transition from reversible assemblies to aggregation-pr...

LabGrymace: Automated Analysis of Mouse Grimace for Quantitative Assessment of Pain Dynamics

Dong, W., Moehn, K. M., Ronan, E. A., Hu, Y., Emrick, J. J., Ye, B.

2026-08-06

1
min

265
words

BIORXIV NEUROSCIENCE

Summary: Accurate assessment of pain in animal models is essential for understanding pain mechanisms, developing analgesics, and ensuring animal welfare. The Mouse Grimace Scale (MGS) provides a sensitive, non-invasive measure of spontaneous pain by quantifying pain-related facial expressions, but its utilit...

Ischemia-reperfusion and acidosis induce retrotransposon derepression in the mouse brain

Zhou, Y., Barattini, A., Zha, X.-m., Sun, W.

2026-08-06

1 min 231 words

BIORXIV NEUROSCIENCE

Summary: Retrotransposons are repetitive DNA elements normally suppressed through epigenetic mechanisms. In aging and neurodegenerative diseases, abnormal retrotransposon activation occurs and leads to neurotoxicity. However, whether ischemic stroke induces retrotransposon activation remains unclear. Here, w...

Acute and cumulative light exposure differentially influence mood in healthy adults

Roddis, C., Didikoglu, A., Ebrahimi, A., Gillespie, A. L., Harmer, C. J., Bano-Otalora, B., Milosavljevic, N.

2026-08-05 1 min 242 words

BIORXIV NEUROSCIENCE

Summary: Light influences mood in both clinical and experimental settings, yet it remains unclear how ambient light exposure relates to mood in daily life, which dimensions of mood are most sensitive to light and over what timescales these associations emerge. Here, we combined continuous personal light moni...

Reduced tubulin polyglutamylation perturbs neuronal function and causes late-onset neurodegeneration

Chakraborty, S., Poggini, S., Albanese, N. C., Ruskova, M., Lavenir, I., Boido, D., Karhanova, A., Besse, L., Al-Inaya, Y., Lebrun, L., Henriot, V., Lansky, Z., Goedert, M., Ciobanu, L., Balastik, M., Branchi, I., Janke, C., Magiera, M. M.

2026-08-05 1 min 146 words

BIORXIV NEUROSCIENCE

Summary: Microtubules are essential for neuronal functions and are involved in many neurodegenerative disorders. A posttranslational modification (PTM) of neuronal microtubules, polyglutamylation, was shown to control cargo transport and induce early-onset neurodegeneration when excessively accumulated. To d...

Clusterin regulates microglial inflammation and cognitive function independent of amyloid pathology in Alzheimer's disease

Rawal, P., Moon, H.-J., Nguyen, V., Khatri, S., Larson, M. A., Vivian, J. C., Saido, T. C., Zhao, L.

2026-08-04 1 min 150 words

BIORXIV NEUROSCIENCE

Summary: Clusterin (CLU) is a major genetic risk factor for late-onset Alzheimer's disease (AD), yet the mechanism underlying this risk remains unclear. This study investigated the role of CLU in regulating microglial inflammation, amyloid pathology, and cognitive function in CLU-deficient and AD models. CLU...

Biological sex and normative cognitive aging across spatial learning, flexibility, and working memory in Fischer 344 rats.

2026-06-15

1
min257
words

BEHAVIORAL NEUROSCIENCE

Summary: Aging is associated with decline in spatial learning, cognitive flexibility, and working memory, yet the extent to which biological sex modulates changes in cognitive function remains unresolved. While sex differences are evident in pathological brain aging, sparse insights from healthy aging popula...

Oxytocin prevents cocaine-induced high-affect 50-kHz vocalizations in female rats.

2026-05-04

1
min255
words

BEHAVIORAL NEUROSCIENCE

Summary: Cocaine's reinforcing properties are a key factor underlying the broad prevalence of cocaine use disorder. Few behavioral measures are capable of assessing cocaine-induced euphoria in murine models, limiting effective treatment options. However, positive affective states can be measured in rats by a...

Treatment of cisplatin-induced olfactory aversion based on selection logic: A novel approach.

2026-05-04

1
min198
words

BEHAVIORAL NEUROSCIENCE

Summary: Aversion can arise from a combination of unconditioned stimuli that induce physical discomfort, such as pain and nausea. Chemotherapy-induced side effects, including taste and olfactory aversion, can persist even after treatment has ended, thereby reducing the quality of life. Currently, however, no...

Characterization of behaviors during food consumption under novelty and threat learning in male and female rats.

2026-07-06

1
min258
words

BEHAVIORAL NEUROSCIENCE

Summary: Fear and anxiety are related but distinct responses to imminent versus uncertain threat. Suppression of eating under novelty is an evolutionarily conserved, cross-species model of anxiety, and it is beneficial to determine if this behavior can predict individual differences in fear learning and memo...

Hippocampal communication with the anterior olfactory nucleus is necessary for context-dependent odor memory.

2026-06-15

1
min166
words

BEHAVIORAL NEUROSCIENCE

Summary: The hippocampus plays a critical role in contextual learning and memory processes. The ability to associate memories and behaviors with the learning context likely involves interactions between the hippocampus and other brain regions where the basic elements of the memory may be encoded. Here, we ex...

Spectral Correlates of Encoding Distinguish Good from Poor Learners

Falkenburg, B. E., Broitman, A. W., Kahana, M. J.

2026-08-04 1 min 175 words

BIORXIV NEUROSCIENCE

Summary: Individuals vary in their ability to encode and recall new experiences, yet neural markers of memory have rarely been linked to these trait-level differences. Subsequent memory effects (SMEs) identify patterns of neural activity during encoding that predict whether an item will later be remembered o...

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Spiking recurrent neural networks (SRNNs) rival gated recurrent neural networks (RNNs) on various tasks, yet they still lack several hallmarks of biological neural networks. We introduce a biologically grounded SRNN that implements Dale's law with conductance-based stands for a-amino-3-hydroxy-5-met...

JOURNAL NEURAL ENGINEERING

Summary: Objective. Imbalanced sample sizes in rapid serial visual presentation (RSVP) can substantially compromise the classification accuracy of electroencephalogram (EEG) analyses based on RSVP system. Approaches. We propose a balanced strategy-based network for feature representation, recombination, and ...

Machine learning approaches for prediction of epilepsy risk across clinical pathways: a systematic review

Amr M Omar, Antonina Omisade, Jason P Gallivan and Gavin P Winston

2026-08-03

1
min

279
words

JOURNAL NEURAL ENGINEERING

Summary: Objective. Machine learning (ML) and deep learning (DL) models are increasingly being explored for individualised epilepsy risk prediction after a first unprovoked seizure (UFS) and after acute brain insults such as stroke or traumatic brain injury. We systematically evaluated their predictive perfo...

DREAMING

Summary: The aim of this study was to evaluate the relationship between body awareness, dream themes, and somatization symptoms in adult women. A total of 213 adult women aged 18–65 years participated in the study via online questionnaire. Body awareness was assessed using the Body Awareness Questionnaire, s...

BIORXIV NEUROSCIENCE

Summary: Background Consciousness is increasingly understood as an emergent property of large-scale brain dynamics that depend upon flexible interactions among distributed cortical and subcortical systems. Although disorders of consciousness (DOC) have traditionally been associated with impaired integration ...

Self-rated continuity between waking and dreaming: Associations with personality.

2026-03-05

1
min139
words

DREAMING

Summary: The continuity hypothesis of dreaming states that our daily activities are reflected in our dreams. The question of whether there are factors, for example, personality, that modulate continuity is still unanswered. The majority of participants of the U.K. library study ($N = 1,375$) stated th...

Stability Strategy Restrictions Do Not Elicit Compensatory Mechanisms During Mediolaterally Perturbed Slow Walking

2025-11-14

1
min242
words

TRANSACTIONS BIOMEDICAL ENGINEERING

Summary: Objective: Healthy individuals have the ability to overcome perturbations when walking without falling. They have multiple stability strategies at their disposal, but it remains unclear how these different strategies compensate for one another when one may be limited due to external factors. The obj...

ARXIV QBIO NC

Summary: arXiv:2309.02332v3 Announce Type: replace Abstract: In the mammalian central nervous system, neurons are organized into populations communicating by spike trains propagating along axonal bundles. How such populations encode and transform information is only partially understood. In this study we ...

Bits per Spike as a Betting Game: An Interpretable Unit for Held-Out Log-Likelihood in Neural Data Analysis

Alex H.
Williams

2026-08-03

1
min

289
words

ARXIV QBIO NC

Summary: arXiv:2607.28779v1 Announce Type: cross Abstract: Held-out log-likelihood is the standard currency for comparing statistical models of neural spike trains, and is often reported as bits per spike relative to a homogeneous Poisson baseline. The units of this metric are difficult to reason about: it ...
