Intrinsic ignition-based propagation networks reveal hierarchical propagation pathways of spontaneous activity in the human brain

Liu, J., Chen, X., Liao, X.

2026-07-21

1
min

242
words

BIORXIV NEUROSCIENCE

Summary: Directed communication across brain regions is fundamental to human brain function, yet how local spontaneous activity links to directed whole-brain propagation patterns remains elusive. Prior studies have characterized local propagation events and global wave-like dynamics, but a framework linking ...

Temporal structure of postural sway reveals altered cortical postural coupling in aging and stroke: insights from nonlinear dynamics and state-space analysis

Hakkak Moghadam Torbati, A., Cabaraux, P., Legrand, T., Mongold, S. J., Yanguma Munoz, N., Yildiran Carlak, E., Iannotta, A., Vander Ghinst, M., Naeije, G., Moumdjian, L., Bourguignon, M.

2026-07-21 1 min 396 words

BIORXIV NEUROSCIENCE

Summary: Background: Balance maintenance in humans is not only a mechanical process, but it also relies on continuous interactions between cortical activity and body dynamics. Alterations in postural sway are commonly observed in aging and stroke and are frequently used to assess balance impairment. However,...

Contribution of Wide Dynamic Range neuronal activation to somatosensory evoked potentials supports use as biomarker of spinal nociceptive processing

Steel, K. A. J., Pickering, A. E., Dunham, J. P., Ajay, E., Krajewski, J., Blockeel, A., Phillips, K. G.

2026-07-21 1 min 243 words

BIORXIV NEUROSCIENCE

Summary: Identifying objective translational biomarkers of spinal nociceptive processing is important to accelerate analgesic development. The primary negative component (N1) of spinal somatosensory evoked potentials (SEPs) has been proposed as such a biomarker. However, the cellular substrates of the N1 pot...

Social agency buffers pain sensitivity during a critical window following spared nerve injury

Toddes, C. A., Bai, K. N., Halperin, I. E., Keeler, W. R., MacMillen, L. K., Heshmati, M., Golden, S.

2026-07-21

1
min

206
words

BIORXIV NEUROSCIENCE

Summary: Social buffering of pain, in which social contact blunts emotional or nociceptive intensity, is well established. However, the degree to which agency over social contact, rather than general reward receipt or social contact alone, modifies pain intensity or pain behaviors remains unclear. Using a so...

Spatially resolved cellular and circuit architecture of the insular cortex controlling different dimensions of pain

Xie, G., Wang, M., Liu, Y., Zhang, Y.

2026-07-20

1 min

167 words

BIORXIV NEUROSCIENCE

Summary: Chronic pain is a leading cause of human suffering, affecting about 20% of the population. The insular cortex (IC) is a central hub for the multidimensional experience of pain, yet how the diverse neurons in IC are organized and assembled into functional circuits remains unclear. Here, combining mul...

BIORXIV NEUROSCIENCE

Summary: In Parkinsons disease (PD), blood-based (BB) biomarkers ubiquitin c-terminal hydrolase L 1 (UCHL-1), glial fibrillary acidic protein (GFAP), and neurofilament light (NfL) correlate with motor or cognitive impairment. However, it is unclear if blood levels of these biomarkers represent changes in nig...

JOURNAL NEUROSCIENCE CURRENT

Summary: <p>The pathogenesis of perioperative neurocognitive disorders (PNDs) involves a complex interplay of genetic vulnerability and environmental insults, with epigenetic regulation acting as a dynamic mediator. However, the cell-specific epitranscriptomic responses to perioperative stressors like sevofl...

Different Brain Regions Support Deliberation during Food Choice in Disordered and Healthy Eating

Muratore, A. F., Hartnett, E. A., Foerde, K., Uniacke, B. W., Walsh, B. T., Steinglass, J. E., Shohamy, D., Bakkour, A.

2026-07-15 1 min 198 words

JOURNAL NEUROSCIENCE CURRENT

Summary: <p>The brain is wired to drive behavior toward foods that are high in sugar and fat. Yet, individuals with anorexia nervosa (AN) prefer low-sugar and low-fat foods to the point of starvation and even death. Here, we aimed to understand how alterations in decision-making processes and associated neur...

GPR37 Modulates Remyelination Following Demyelinating Injury

Hajbi Karasik, R., Vainshtein, A., Aharoni, R., Eshed-Eisenbach, Y., Marazziti, D., Peles, E., Yang, H.-J.

2026-07-15 1 min 223 words

JOURNAL NEUROSCIENCE CURRENT

Summary: <p>GPR37 has been recognized as a negative regulator of oligodendrocyte myelination. However, its role in demyelination recovery remains unclear. To examine the function of GPR37 in remyelination, we compared wild-type and GPR37-deficient mice of either sex after focal (lysolecithin) or global (cupr...

BIORXIV NEUROSCIENCE

Summary: The Quebec 1000 Families (Q1K) platform has been designed to recruit, phenotype, and collect biospecimens from a large cohort of families with at least one member with autism spectrum disorder or a related neurodevelopmental condition. As part of the Q1K protocol, an experimental test battery was de...

Selection navigates a degenerate circuit space: behavioral individuation without structural differentiation in constrained neuroevolution

Khetan, P., Asopa,
A.

2026-07-20

1
min

253
words

BIORXIV NEUROSCIENCE

Summary: Neural degeneracy, the capacity of structurally distinct circuits to perform the same function, is typically studied as an emergent property of biological neural systems. Here we impose it by construction, engineering the conditions that make degeneracy the expected outcome of evolutionary search, a...

Neural correlates of performance and mental workload dynamics during learning of upper-limb body-powered and myoelectric prostheses

Christopher Gaskins, Kimberly L Kontson, Hyuk Oh, Xin He, Bradley D Hatfield and Rodolphe J Gentili

2026-07-14 1 min 252 words

JOURNAL NEURAL ENGINEERING

Summary: Objective. Despite the technological advancement of upper limb prostheses, it is unclear how device design affects the cognitive-motor processes and mental workload underlying the acquisition of dexterity skills. This study examined changes in performance and mental workload as individuals with inta...

BIORXIV NEUROSCIENCE

Summary: Dopamine contributes to reward-related decision making, but its contributions to decision contexts that include explicit punishment are less well understood. To elucidate the role of ventral tegmental area (VTA) dopamine neurons in decision making under risk of punishment, we used fiber photometry t...

Enkephalin constrains fear learning via volume transmission to the lateral amygdala

Wang, R., Yau, J., Kalra, M., Gilschist, S., Livermore, A., Gregoriou, G., Schennink, M., Moreno, C., Santhakumar, R., Rafiei, N., Hao, Z., Estrella, J., Thomsen, T., Hartvig, E., Capertonova, M., Jensen, K., Landler, S., Tian, L., Neely, G., Berndt, A., Bruchas, M., McNally, G. E., Bagley, E. E.

2026-07-20

1
min

207
words

BIORXIV NEUROSCIENCE

Summary: Fear learning involves the formation of associations between cues and aversive outcomes, a process that must be tightly regulated to prevent excessive or generalised fear. Dopamine release in the lateral amygdala (LA) drives fear acquisition, whereas endogenous opioids constrain it. However, whether...

Hill-Type Models of Skeletal Muscle and Neuromuscular Actuators: A Systematic Review

2025-09-12

1
min200
words

REVIEWS BIOMEDICAL ENGINEERING

Summary: Backed by a century of research and development, Hill-type models of skeletal muscle, often including a muscle-tendon complex and neuromechanical interface, are widely used for countless applications. Lacking recent comprehensive reviews, the field of Hill-type modeling is, however, dense and hard-t...

TRANSACTIONS BIOMEDICAL ENGINEERING

Summary: Objective: Recent advances in electroencephalography (EEG) technology present new opportunities for mobile neuroimaging and real-world human neuroscience studies. However, EEG is sensitive to many sources of artifacts, and it can be especially difficult to remove high amplitude motion artifacts. Met...

CLINICAL NEUROSCIENCE

Summary: Many studies have examined the effect of meditation sessions led by experienced teachers on personal benefits for adults. The present study investigated the effect of broad-based mindfulness practices with an adolescent peer facilitator on prosocial outcomes in addition to individual gains. The 20 s...

Sensory Feedback for Upper-Limb Amputees by Noninvasive Electrical Stimulation and Its Performance Assessment

2026-03-20

1
min

253
words

TRANSACTIONS HAPTICS

Summary: Most commercial prostheses lack a function of natural and intuitive sensory feedback, which is one of the reasons for their high rate of abandonment. Transcutaneous Electrical Nerve Stimulation (TENS) has been proved as an effective approach to evoke sensations for limb amputees. This paper aims to ...

Neural correlates of the subjective experience of free-will during value-based risky decisions: a pilot study

Modak, P., Brown, J.
W.

2026-07-17

1
min

198
words

BIORXIV NEUROSCIENCE

Summary: Underlying the very notion of choice is the fundamental idea of free-will, which is challenged by decision-neuroscience aiming to explain and predict choices using interactions of neurons. The question of whether any choice is truly a free-choice and born out of free-will has long been a subject of ...

Edge controllability is associated with treatment response to repetitive transcranial magnetic stimulation in depression.

Dey,
S.

2026-07-17

1
min

164
words

BIORXIV NEUROSCIENCE

Summary: Repetitive transcranial magnetic stimulation (rTMS) is an established treatment for major depressive disorder (MDD), yet variability in treatment response remains a significant challenge. Network control theory provides a framework to quantify how brain networks facilitate state transitions, but pri...

Mapping Focal and Generalized Effects of Common Genetic Variants on Human Brain Structure

Gleave, E. J., Garcia-Marin, L. M., Ceja, Z., Renteria, M. E., Chattopadhyay, T., Gaser, C., Rajagopalan, P., Thompson, P. M.

2026-07-17 1 min 200 words

BIORXIV NEUROSCIENCE

Summary: Genome-wide association studies (GWAS) have advanced the quest to understand how specific genetic variants influence human brain structure and function. Recent work has identified hundreds of common variants associated with subcortical brain volumes, sparking interest in how these genetic markers ov...

Hippocampal-midcingulate connectivity is associated with representational integration during cognitive map updating

Fu, J., Huang, C., Wang, R., Hasegawa, I., Jimura, K., Nakahara, K.

2026-07-17 1 min

146 words

BIORXIV NEUROSCIENCE

Summary: Cognitive maps organize experience into structured internal models that support goal-directed behavior. Although map formation has been extensively studied in the human hippocampus, the neural mechanisms supporting flexible updating of established maps remain unclear. We used fMRI to track the forma...

A consensus atlas of human brain development defines cell type-specific maturation trajectories across the lifespan

Venkatesan, S., Nano, P., Werner, J., Malaiya, S., Herb, B., Gao, Y., Wang, L., Bhaduri, A., Nowakowski, T. J., Colantuoni, C., Ament, S. A., Gillis, J.

2026-07-17 1 min 157 words

BIORXIV NEUROSCIENCE

Summary: Human neurodevelopment is a continuous process that begins prenatally and extends into postnatal life. Current transcriptomic datasets are limited, fragmented across analytical frameworks, precluding comprehensive reconstruction of cellular trajectories linking developmental states to mature cell ty...

Circuit logic of oxytocin and vasopressin complementary actions

Alexandre
Charlet

2026-07-17

1 min

240 words

FRONTIERS NEUROSCIENCE

Summary: Oxytocin (OT) and vasopressin (VP) are evolutionarily conserved neuropeptides that regulate social behavior, emotional processing and physiological homeostasis. Although traditionally studied as individual modulators of affiliation, stress and autonomic function, emerging evidence indicates that the...
