Activation of DMH GABAergic neurons, but not local GABAergic AgRP neurons, attenuates chronic stress-induced POMC neuron hyperactivity

 Chen, Y., Moghaddam, A. K., Du, Q., Lei, Y., Lu, X.-Y.

2026-04-03

1 min

240 words

BIORXIV NEUROSCIENCE

Summary: Identifying the neural circuits engaged and reshaped by chronic stress is critical for understanding how adaptive responses shift to maladaptive behaviors that contribute to stress-related disorders. Our previous work demonstrates that chronic unpredictable stress (CUS) induces a persistent increase...

Nonuniform scaling of cerebellar cortical-nuclear architecture across primates revealed by cross-species atlases

Saleem, K. S., Avram, A. V., Glen, D., Basser, P.

2026-04-03

1 min

151 words

BIORXIV NEUROSCIENCE

Summary: The cerebellum shapes distributed motor and association networks through precisely organized pathways linking the cerebellar cortex to the deep cerebellar nuclei (DCN), its principal output structures. Whether these cortical and nuclear compartments scale proportionally across primates and how their...

Sphingolipid remodelling in SPT-related neuropathies

Ziak, N., Hornemann, T., Lone, M. A.

2026-04-03

1 min

264 words

BIORXIV NEUROSCIENCE

Summary: Sphingolipid homeostasis is critical for neuronal structural and functional integrity in the central and peripheral nervous systems. The rate-limiting enzyme of this pathway, serine-palmitoyltransferase (SPT), establishes the metabolic entry point into sphingolipid biosynthesis. Mutations in the SPT...

Enhancing 3D semantic scene completion with refinement module

 Bo Song
  2026-03-06
  1 min
  118 words

FRONTIERS NEUROROBOTICS

Summary: We propose ESSC-RM, a plug-and-play Enhancing framework for Semantic Scene Completion with a Refinement Module, which can be seamlessly integrated into existing semantic scene completion (SSC) models. ESSC-RM operates in two phases: a baseline SSC network first produces a coarse voxel prediction, wh...

The influence of proposer features on inequity aversion: A meta-analysis of event-related potential (ERP) studies.

 2026-03-05  1 min  255 words

NEUROPSYCHOLOGY

Summary: Objective: Identical information can be perceived differently depending on the framing in which it is presented. Consequently, individuals may exhibit varying degrees of inequity aversion toward objectively inequitable allocations depending on the proposer features. However, a precise characterizati...

From the body and through the body: A multidimensional assessment of functional body representations, interoceptive dimensions, and quality of life in multiple sclerosis.

 2025-12-11  1 min  221 words

NEUROPSYCHOLOGY

Summary: Objective: Multiple sclerosis (MS) is a neurological condition that affects physical, cognitive, and emotional functions, significantly impacting quality of life (QoL) even in its early stages. Beyond the typical motor, sensory, visual, and brainstem disorders usually assessed by the Expanded Disabi...

Mediating effect of cognitive reserve on associations between processing speed and memory in older adults with and without multiple sclerosis.

 2025-12-08  1 min  266 words

NEUROPSYCHOLOGY

Summary: Objective: Slower processing speed is implicated in memory impairment in both aging and multiple sclerosis (MS). Cognitive reserve serves as a buffer against memory decline and dementia, but no studies have reported on its mediating effect on the associations between processing speed and memory. The...

Loss of hand control expressiveness revealed by task- and individual-specificity in spatiotemporal finger coordination

 Ihejirika, P., Rai, D., Rosenberg, M., Xu, J.

 2026-04-02

 1 min

 149 words

BIORXIV NEUROSCIENCE

Summary: Stroke impairs dexterous hand use in daily activities, which may be due to compromised coordination complexity and diminished task-appropriate and individually-distinctive coordination (expressiveness). This loss of complexity and expressiveness, however, has not been elucidated, especially in spati...

Show HN: Semantic atlas of 188 constitutions in 3D (30k articles, embeddings)

 joaoli131  2026-04-02  1 min  75 words

HACKER NEWS

Summary:

I built this after noticing that existing tools for comparing constitutional law either have steep learning curves or only support keyword search. By combining Gemini embeddings with UMAP projection, you can navigate 30,828 constitutional articles from 188 countries in 3D and find conceptually re...

Promoting Healthy Ageing through Choral Training: A 9-Month Multidomain Intervention (MultiMusic) Enhances Neural Processing Speed in Community-Dwelling Older Adults

Lippolis, M., Pantaleo, A., Mazzon, L., Diomede, R., Delussi, M., Seminerio, E., Quaranta, N., Pilotto, A., Solfrizzi, V., Vuust, P., Brattico, E.

2026-04-01

1
min

331
words

BIORXIV NEUROSCIENCE

Summary: Background Older adulthood is often accompanied by declines in auditory processing and cognitive functioning, increasing the risk of reduced autonomy and quality of life. Multidomain lifestyle interventions have shown potential to counteract these changes, and choir-based activities represent a prom...

Coupled beta and high-frequency oscillations emerge from synchronized bursting in a minimal model of the parkinsonian subthalamic nucleus

 Sheheitli, H., Johnson, L. A., Wang, J., Aman, J. E., Vitek, J. L.

 2026-04-01  1 min

 299 words

BIORXIV NEUROSCIENCE

Summary: Local field potentials recorded from the subthalamic nucleus (STN) in Parkinson's disease (PD) exhibit a distinctive multiscale spectral signature: exaggerated beta-band oscillations (13-30 Hz) coupled to high-frequency oscillations (HFOs, 200-400 Hz), with HFO amplitude being phase-locked to the be...

Eye-head coordination during goal-directed orienting in mice

 Verdone, B. M., Chang, H. H. V., Roberts, D. C., Cullen, K. E.

 2026-04-01  1 min  219 words

BIORXIV NEUROSCIENCE

Summary: In afoveate species such as mice, it is accepted that gaze is typically redirected by head movements with a saccade-and-fixate strategy, while the eyes primarily stabilize vision within a limited oculomotor range. This view suggests that the accompanying eye movements are primarily reflexive, driven...

Shared and Unique Connectivity Signatures of Reading and Language Deficits

 2026-03-12  1 min  253 words

COGNITIVE NEUROSCIENCE

Summary: Reading ability depends on multiple cognitive skills, including decoding and language comprehension, which can vary widely across individuals—even among those with similarly low reading performance. To better understand the brain basis of this variability, we used connectome-based predictive modelin...

When a Man Says He Is Pregnant: Event-related Potential Evidence for a Rational Account of Speaker-contextualized Language Comprehension

 2026-03-12  1 min  296 words

COGNITIVE NEUROSCIENCE

Summary: Spoken language is often, if not always, understood in a context formed by the identity of the speaker. For example, we can easily make sense of an utterance such as “I’m going to have a manicure this weekend” or “The first time I got pregnant I had a hard time” when spoken by a woman, but it would ...

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Computation separates time from space: nondeterministic problems are exponential in time (the “Time Dragon”) but polynomially simulable in space (the “Space Dragon”), as formalized by Savitch's theorem ($\text{NPSPACE} \subseteq \text{PSPACE}$). We propose that the brain physically instantiates this theorem through Recursive...

Diffusion-QSM: Diffusion Model With Time-Travel and Resampling Refinement for Quantitative Susceptibility Mapping

 2025-09-02  1 min  222 words

TRANSACTIONS BIOMEDICAL ENGINEERING

Summary: Objective: Quantitative susceptibility mapping (QSM) is a useful magnetic resonance imaging technique. We aim to propose a deep learning (DL)-based method for QSM reconstruction that is robust to data perturbations. Methods: We developed Diffusion-QSM, a diffusion model-based method with a time-trav...

BIORXIV NEUROSCIENCE

Summary: Astrocytes are highly abundant in the mammalian brain and coordinate with neurons and other glial cells to regulate neural circuit structure, function, and blood brain barrier integrity among many to maintain proper brain homeostasis. Astrocytes perform most of these functions owing to their highly ...

Hapln1-HA signaling promotes progenitor cell proliferation and spinal cord regeneration

Xu, Y., Zhou, L., Saraswathy, V. M., Mcadow, A. R., Mokalled, M.

2026-03-31

1 min

148 words

BIORXIV NEUROSCIENCE

Summary: Adult zebrafish exhibit scarless repair and functional recovery following spinal cord injury. Their regenerative capacity is attributed to potent stem-like progenitors that mediate neuronal and glial repair. Zebrafish are thought to lack anti-regenerative extracellular matrix (ECM) components abunda...

1 min

171 words

BIORXIV NEUROSCIENCE

Summary: Anticipating daily food availability is a conserved circadian behavior that persists even in animals lacking the suprachiasmatic nucleus, yet the neural substrates of this behavior remain poorly defined. Striatal dopamine signaling through D1 receptors promotes food anticipatory activity (FAA), but ...

Naturalistic Stimulus Reconstruction from fMRI: A Primer in the Natural Scenes Dataset

 Yildiz, U., Urgan, B.
A.

 17 2026-03-30  1 min

 187 words

BIORXIV NEUROSCIENCE

Summary: Reconstructing natural images from brain activity represents one of the most compelling demonstrations of the synergy between modern neuroimaging and machine learning. However, the computational pipelines underlying these results remain scarcely accessible, difficult to reproduce, and offer limited ...

Chronic short sleep in early life accelerates cognitive decline via disrupted proteostasis

 Komlo, R., Sengupta, K., Strus, E., Naidoo, N.

 17 2026-03-30  1 min

 206 words

BIORXIV NEUROSCIENCE

Summary: Chronic short sleep (CSS) is an emerging public health issue that frequently begins in adolescence and is common among healthcare professionals and others engaged in shift work. Epidemiological studies associate CSS and sleep disruption with metabolic disorders, cardiovascular disease, cognitive dec...

A retrospective public external benchmark of healthy-to-stroke lower-limb EEG transport identifies constraints from source construction, adaptation burden, and confound sensitivity

 Choi, D., Choi, A., Lam, Q., Park, J.

 2026-03-30

 1 min

 293 words

BIORXIV NEUROSCIENCE

Summary: Background: Lower-limb EEG is a rehabilitation-facing control signal for stroke neurorehabilitation and future non-invasive brain-spine interfaces, yet a public external benchmark that jointly audits source construction, minimal adaptation burden, and confound sensitivity is lacking. We therefore te...
