1
min

156
words

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: Dopamine (DA) is an important neuromodulator that has been suggested to play key roles in a range of neuropsychiatric disorders. However, its computational impact at a general single-neuron level has not been elucidated. Here, we extended a spike-timing-dependent plasticity (STDP)-based single-neuro...

BIORXIV NEUROSCIENCE

Summary: Discrete voluntary movement depends on rapid changes in neural excitability across cortical and corticospinal circuits, yet how intrinsic movement-related neural states shape multi-level excitability remains unclear. Here, we combined individualized, state-targeted transcranial magnetic stimulation ...

Decoupling axonal regrowth and branching through Imp-dependent RNA regulation during neuronal remodeling

Nogueres, M., Rekad, Z., Besse, F., Medioni, C.

2026-07-30

1
min185
words

BIORXIV NEUROSCIENCE

Summary: Structural remodeling of neuronal projections in response to developmental cues, injury, or disease is essential for adaptive circuit rewiring. This dynamic process, characterized by pruning and regrowth phases, requires the coordinated execution of neurite regrowth and branching to establish functi...

Sleep reactivation of positive self-evaluation reveals neural-evaluative alignment that varies with depressive symptoms

Yao, Z., Chen, D., Liu, J., Wei, J., Xia, T., Zuo, X., Chen, C. X., Chan, R. N. Y., Li, S. X., Qin, P., Yuan, T., Zhang, Z., Lee, T. M. C., Ma, Y., Hu, X.

2026-07-29 1 min 159 words

BIORXIV NEUROSCIENCE

Summary: Positive self-evaluation underpins resilience and mental health, yet how to enhance positive self-evaluation and the underlying neurocognitive mechanisms remain poorly understood. Existing data mostly examined self-evaluative processing of the wakeful minds, with the role of sleep remain unexplored....

From periodic/aperiodic to static/dynamic: rethinking the decomposition of neural power spectra

Marinazzo,
D.

2026-07-29

1
min

260
words

BIORXIV NEUROSCIENCE

Summary: The power spectrum of electrophysiological signals exhibits both narrowband peaks and a broadband 1/f-like slope. The two are routinely treated as separable components: a "periodic" foreground and an "aperiodic" background; and each has been related to behaviour, cognition, and clinical status. This...

PSYCHOMUSICOLOGY

Summary: Nostalgia, a past-oriented emotion characterized by complex affective responses, is a pervasive and fundamental human experience. Prior research has demonstrated that nostalgia serves various socioemotional functions, such as promoting a sense of belonging, enhancing one's perception of meaning in l...

Preferred music listening does not affect cognitive inhibition in young and older adults.

2023-10-12

1
min227
words

PSYCHOMUSICOLOGY

Summary: Previous literature has found links between music listening and cognitive performance. Specifically, background music may play a role in modulating cognitive inhibition. However, determining what type of background music affects cognitive inhibition throughout the lifespan has not been studied. The ...

Brain-specific PP1/LRRK2 interaction-targeting peptides as a novel strategy for Parkinson's disease treatment

Rebollo, A., Loisel, S., Petit, F., Auregan, G., Guillemier, M., Benfissa, M., Gipchtein, P., Touffeil Mohamed, A., Posnograjeva, K., Teesalu, T., Aron Badin, R.

2026-07-29

1
min186
words

BIORXIV NEUROSCIENCE

Summary: The LRRK2 kinase has emerged as a priority therapeutic target due to its well-documented role in Parkinson's diseases (PD). One of LRRK2 key partners is the phosphatase PP1, which dephosphorylates LRRK2. Therefore, modulating this protein/protein interaction represents a promising therapeutic strate...

H3K27me3 maintains baseline network excitability after status epilepticus

Espina, J. E. C., Hoffman, O. R., Koehler, J., Schoenike, B., Roopra, A.

2026-07-28

1
min

299
words

BIORXIV NEUROSCIENCE

Summary: The processes by which epileptic insults precipitate the molecular, cellular, and network alterations in the brain that lead to epilepsy are poorly understood. We previously discovered that after status epilepticus (SE -- an epilepsy inducing severe bout of seizures) the H3K27 methylase Enhancer of ...

How ghosting and stress impact vulnerable narcissism and maladaptive daydreaming: The role of mindfulness and rumination.

2024-09-12

1
min204
words

CLINICAL NEUROSCIENCE

Summary: The present study aims to explore the influence of ghosting and stress on maladaptive daydreaming and vulnerable narcissism within a multivariate framework, using mindfulness and rumination as mediators. We employed a cross-sectional design and conducted it among 301 university students (M<...)

The conscious experience of thinking aloud: Are positive feelings associated with better think-aloud performance?

2024-12-30

1
min216
words

CLINICAL NEUROSCIENCE

Summary: The think-aloud interview is a psychological procedure used to measure an individual's cognition in solving a task. However, very little is known about how an individual's conscious experience of the interview might be associated with their performance during the interview. This is consequential as ...

Exploring the beta burst dynamics of cued voluntary movements in Tourette Syndrome

Houlgreave, M., Gialopsou, A., Boto, E., Brookes, M. J., Jackson, S. R.

2026-07-28

1
min

184
words

BIORXIV NEUROSCIENCE

Summary: Tourette Syndrome (TS) is a neurodevelopmental hyperkinetic disorder characterised by involuntary tics. These tics are thought to arise due to hyperexcitability of the motor cortex due to disinhibition within the cortico-striato-thalamo-cortical pathway. Given the involvement of motor circuits in th...

NEUROPSYCHOLOGY

Summary: Objective: Stiers (2026) presented a case example of differential diagnosis in clinical neuropsychology wherein standardized testing was not possible, and discussed a structure and process for using history, behavioral observations, and disease base rates to develop a preliminary diagnosis. In respo...

Cortical and Thalamic Afferent Connectomes Distinguish ACC Subregions of the Macaque Brain

Myers, D. C., Love, T. M., Fudge, J. L.

2026-07-22

1
min

252
words

JOURNAL NEUROSCIENCE CURRENT

Summary: <p>In humans and nonhuman primates, the anterior cingulate cortex (ACC) is an interface between "interoceptive" and "exteroceptive" domains. The ACC contains discrete subdivisions that are distinct in cytoarchitecture, connectivity, and function. The subgenual ACC (sgACC) is a key area for arousal s...

2026-07-27

1 min 141 words

BIORXIV NEUROSCIENCE

Summary: Sensory processing is dynamically tuned by internal state, yet how metabolic signals reshape the earliest stages of sensory circuits remains poorly understood. Here we identify a circuit mechanism by which satiety suppresses olfactory sensitivity at the first central synapse in the mouse olfactory b...

A candidate electromagnetic channel for coordination between physically separated *Drosophila*

Douka, K., Skoulakis, E., Turin, L.

2026-07-27

1 min

263 words

BIORXIV NEUROSCIENCE

Summary: While filming *Drosophila melanogaster* recovering together from xenon anesthesia, we noticed frequent synchronous pauses in flies recovering in the same chamber. To ask whether such coordination could survive physical separation of the animals, we housed flies individually in the opaque wells of a mu...

Delineating the heartbeat-evoked potential from cardiac artefact

Kandasamy, R. O., Virjee, R.-I., Carmichael, D. W., Garfinkel, S. N., Yogarajah, M.

2026-07-27

1 min 282 words

BIORXIV NEUROSCIENCE

Summary: Introduction The heartbeat-evoked potential (HEP) is widely interpreted as an EEG/MEG marker of cortical processing of cardiac afferent signals. It is superimposed on electrical and mechanical signals generated by the heartbeat. Because the neural response and cardiac artefact share the same trigger...

The theta paradox—delayed reduction of frontal midline theta following downregulation neurofeedback training

Silvia Erika
Kober

2026-07-22

1
min

270
words

FRONTIERS HUMAN NEUROSCIENCE

Summary: Phasic increase of frontal midline theta (Fm theta) power has been described as a key indicator of cognitive processing, while relatively lower task-related Fm theta power is associated with reduced cognitive strain, reflecting less intensive cognitive processing. In a previous investigation, reduce...
