Neurocognitive Dynamics Underlying Penalty-induced Boosting of Proactive Metacontrol and Its Influence on Reactive Metacontrol

17

2026-03-12

1
min

221
words

COGNITIVE NEUROSCIENCE

Summary: Metacontrol states involve adapting cognitive control to contextual demands—being more flexible in frequent task-switching environments or more stable in those with infrequent switching. While these metacontrol states can be engaged proactively in anticipation or reactively in response to specific c...

Tracking the Unconscious: Neural Evidence for the Retention of Unaware Information in Visual Working Memory

 2026-03-12  1 min  207 words

COGNITIVE NEUROSCIENCE

Summary: This study investigates the retention of visual information in visual working memory (VWM) when individuals are unaware of it, aiming to provide clear-cut evidence for an unconscious VWM effect. To explore the underlying neural mechanisms, we monitored a critical ERP component, specifically the cont...

Visual Working Memory Representations Selectively Drop in Contralateral Visual Cortex but Remain Decodable in Parietal Cortex after Eye Movements

 2026-03-12  1 min  207 words

COGNITIVE NEUROSCIENCE

Summary: It has been suggested that our visual system does not only process stimuli that are directly available to our eyes but also has a role in maintaining information in visual working memory (VWM) over seconds. However, two critical questions remain unresolved. First, are VWM representations spatially s...

Influence of Familiar Distal Landmarks on Goal Representation: A Functional Magnetic Resonance Imaging Study

 2026-03-12  1 min  247 words

COGNITIVE NEUROSCIENCE

Summary: Humans can perceive their relative position to the goal according to distal landmark cues (DLCs), which are cues situated in the distance and beyond the navigation scope. Specifically, familiar DLCs can facilitate the accuracy of spatial representations in human navigation. It is still unclear how h...

The Time Course of Attention Engagement in a Single-stream Rapid Serial Visual Presentation Design

 2026-03-12  1 min  267 words

COGNITIVE NEUROSCIENCE

Summary: When two stimuli are presented at the same spatial location in close temporal proximity—typically less than 500 msec apart—the second stimulus is often not perceived, a phenomenon known as attentional blink (AB). This striking failure of visual awareness is thought to reflect limitations in the allo...

Mapping social profiles in childhood and adolescence: associations with cognition and brain structure

 Trachtenberg, E., Mousley, A., Jelen, M., Astle, D.

 2026-04-21  1 min  243 words

BIORXIV NEUROSCIENCE

Summary: Objective: Social difficulties are transdiagnostic in childhood, but their heterogeneity is poorly characterised and rarely treated as a primary neurodevelopmental phenotype. This matters because childhood and adolescence are sensitive periods for peer relationships and brain development. We used da...

Direct Assessment of Short-Latency Intracortical Inhibition via Immediate TMS-Evoked Potentials

Christiansen, L., Song, Y., Haagerup, D., Beck, M. M., Montemagno, K. T., Rothwell, J., Siebner, H. R.

2026-04-20

1
min255
words

BIORXIV NEUROSCIENCE

Summary: Short interval intracortical inhibition (SICI) is the most widely used neurophysiological index of GABAergic inhibition in the human cortex. However, it is an indirect measure, inferring synaptic inhibition from suppression of peripherally recorded motor evoked potentials (MEPs) elicited by transcranial magnetic stimulation (TMS).

Distinct contributions of motor imagery and execution to history-dependent biases in reaching

 Seegelke, C., Heed,
T.

 17 2026-04-20

 1
min

 175
words

BIORXIV NEUROSCIENCE

Summary: The recent movement history shapes motor performance, that is, previous movements can affect current movement characteristics such as trajectory shape. History effects are commonly attributed to carryover of motor-related activity. However, action execution entails sensory feedback; therefore, an al...

The Signal Generating (SiGn) fMRI Phantom

 Galea, S., Seychell, B. C., Galdi, P., Hunter, T., Bajada, C. J.

2026-04-18

 1 min

236 words

BIORXIV NEUROSCIENCE

Summary: Functional magnetic resonance imaging (fMRI) quality assurance has traditionally relied on static, geometrically regular phantoms that cannot generate the dynamic signal changes fMRI analysis pipelines are designed to detect. Here we present the Signal Generating (SiGn) anthropomorphic brain phantom...

NeuralVisionNet: a probabilistic neural process model for continuous visual anticipation

 Xia Chen  2026-03-24  1 min  146 words

FRONTIERS COMPUTATIONAL NEUROSCIENCE

Summary: The ability to anticipate future events continuously is a hallmark of biological vision, yet standard deep learning models often struggle with long-term coherence due to the rigid discretization of time. In this paper, we propose NeuralVisionNet, a probabilistic framework that models visual anticipa...

Hippocampus consolidates memory in the upstate of cortical sleep slow oscillations

 Harkotte, M., Inostroza, M., Born, J., Niethard, N.

 2026-04-17  1 min  139 words

BIORXIV NEUROSCIENCE

Summary: Cortical slow oscillations (SOs), a hallmark of non-rapid eye movement (NonREM) sleep, have been proposed to support systems memory consolidation by organizing hippocampal-cortical communication. However, whether consolidation requires hippocampal memory processing during SO-defined windows is unclear...

BIORXIV NEUROSCIENCE

Summary: The brain generates predictions to prepare for upcoming events. Because the environment is not perfectly predictable, the brain also estimates the certainty of these predictions and adjusts preparatory processes accordingly. Given that autistic individuals often resist even small changes to everyday...

Psilocybin reshapes cortical inhibition through selective interneuron recruitment

 Davoudian, P. A., Jiang, Q., Knox, C. A., Savalia, N. K., Shao, L.-X., Wilson, J., Weiner, A. M., Chong, C. W., Liao, C., Nothnagel, J. D., Sakurai, T., Kwan, A. C.

 2026-04-17  1 min  124 words

BIORXIV NEUROSCIENCE

Summary: Psychedelics show therapeutic potential for treating psychiatric disorders. While studies have emphasized the roles of cortical pyramidal cells, GABAergic neurons also express serotonin receptors and are therefore likely targets of psychedelics. In this study, we determine the effect of psilocybin o...

Brain-wide mapping of neuroanatomical connections to the auditory cortex of hearing and deaf mice

 Harmon, T. C., Jin, A. C., Hardin, E. J., Mooney, R.

 2026-04-16  1
min

 153
words

BIORXIV NEUROSCIENCE

Summary: Remarkable therapeutic innovations have made it possible to establish hearing in congenitally deaf subjects. Despite these advances, a potential obstacle to restoring auditory function is that the absence of auditory experience alters the connectivity of the auditory cortex, a region that contribute...

Causal modulation of cortical amplitude coupling through dual-site amplitude-modulated tACS

Fiene, M., Siems, M., Kammerer, T., Schneider, T. R., Engel, A. K.

2026-04-16

1 min

254 words

BIORXIV NEUROSCIENCE

Summary: Background: Intrinsic functional coupling at multiple temporal scales is a hallmark of human brain dynamics. Among these coupling modes, slow co-fluctuations of oscillatory amplitudes, termed amplitude coupling, are thought to represent a key organizing principle of the large-scale functional archit...

The efficacy of oral melatonin in preventing postoperative delirium for patients undergoing orthopedic surgery under general anesthesia: A randomized controlled trial.

 2023-06-15  1 min  206 words

CLINICAL NEUROSCIENCE

Summary: Delirium is a change in concentration that occurs acutely in association with a disturbed level of consciousness. Delirium is more common in orthopedic surgery patients than in general surgery patients. This study was conducted to determine the efficacy of administering melatonin preoperatively in p...
