Neural correlates of the subjective experience of free-will during value-based risky decisions: a pilot study

Modak, P., Brown, J.
W.

2026-07-17

1
min198
words

BIORXIV NEUROSCIENCE

Summary: Underlying the very notion of choice is the fundamental idea of free-will, which is challenged by decision-neuroscience aiming to explain and predict choices using interactions of neurons. The question of whether any choice is truly a free-choice and born out of free-will has long been a subject of ...

A Role for Astrocyte Metabolism in Species-Specific Neuronal Development

Steiner, S. C., Foster, K., Chinn, R. R., Pratt, J., Fernandes, S., Sharma, A., Santos, R., Metallo, C. C., Marchetto, M. C., Gage, F. H.

2026-07-17 1 min 255 words

BIORXIV NEUROSCIENCE

Summary: Human neurons develop more slowly than non-human primate neurons. This phenomenon, termed neoteny, is thought to contribute to several human-specific features of the brain, including humans' expanded cortices. However, much of the research on this difference in neuronal development rate has focused ...

Neural Evidence That Gender-Inclusive Language Attenuates Automatic Gender Predictions

Serafini, L., Abbondanza, M., Pesciarelli, F.

2026-07-16

1
min

236
words

BIORXIV NEUROSCIENCE

Summary: Languages vary in whether and how they encode gender. As societies pursue greater inclusiveness, gender-inclusive language (GIL) has emerged as a debated innovation, introducing pronouns and morphological strategies to neutralize grammatical gender (e.g., todxs, for todos/todas, "all"). Yet whether ...

Surprisal contributes little beyond contextual embeddings in high-gamma ECoG encoding

Sakuma,
T.

2026-07-16

1
min

137
words

BIORXIV NEUROSCIENCE

Summary: Surprisal and contextual embeddings are both derived from large language models and are widely used to predict neural responses during language comprehension, but it is unclear whether surprisal adds information beyond embeddings. We test this directly: does word surprisal improve out-of-sample pred...

Brain-wide gaze-dependent activity during eyes-closed rest and sleep

Nudelman, Z., Nau,
M.

2026-07-16

1
min

145
words

BIORXIV NEUROSCIENCE

Summary: Gaze behavior and brain activity are tightly coupled during perception and mental imagery. Whether this coupling extends to eyes-closed states remains largely unknown, primarily because measuring eye movements alongside brain activity is difficult when the eyes are closed. Here, we used a scalable M...

Marker-free deformable registration and fusion for augmented reality-guided positive margin localization during tumor resection surgery

Yue Yang, Annie Benson, Matthieu Chabanas, Jason Slagle, Thomas Myles, Matthew B. Weinger, Jon S. Heiselman, Michael I. Miga, Michael Topf, Jie Ying Wu

2026-07-16 1 min 254 words

ARXIV CS HC

Summary: arXiv:2607.13343v1 Announce Type: cross Abstract: Positive margins in head and neck oncologic surgery require mapping specimen-side pathology findings to the patient resection bed. This is challenging because pathologists identify the positive margin on slices of the resected, deformed specimen, wh...

PSYCHOMUSICOLOGY

Summary: Having participants listen and react to musical stimuli is one of music cognition's foundational methods. Whereas most researchers have used stimuli adapted from existing musical traditions in such work, others have incorporated artificial stimuli (i.e., stimuli generated specifically for research t...

Evidence of predictive information compression in latent space in humans during speech listening

Corsini, A., Schneider, S., Tomassini, A., Pedani, L., Fadiga, L., D'Ausilio, A.

2026-07-15

1
min

149
words

BIORXIV NEUROSCIENCE

Summary: Speech perception requires transforming acoustic input into neural representations that support linguistic understanding, yet its underlying computational principles remain unclear. Classical efficient coding theories posit optimal compression of sensory input, whereas alternative accounts propose t...

Transcriptomic signatures associated with mania-to-depression and depression-to-mania transitions in bipolar disorder: a case report using induced microglia-like (iMG) cells

Inamine, S., Kyuragi, S., Ohgidani, M., Kimura, T., Inoue, I., Nakao, T., Kato, T. A.

2026-07-15

1 min 235 words

BIORXIV NEUROSCIENCE

Summary: Introduction Bipolar disorder (BD) is characterized by recurring episodes of mania and depression. Despite extensive research, the pathophysiology underlying these mood swings remains elusive. Emerging evidence indicates a potential role for neuroinflammation and microglial activation in the pathoph...

BIORXIV NEUROSCIENCE

Summary: Metabolic pathways are increasingly recognized as tractable targets in aging and disease. Building on prior work demonstrating that supplementation with low-molecular weight metabolites (amino acids, vitamins, and their intermediates) can extend lifespan in *Caenorhabditis elegans*, we focused on pant...

Assessing Microcirculation Impairment in Ischemic Stroke Mice Using Arteriovenous Co-fluctuation Analysis

Yang, J., Niu, B., Bi, Y., Yuan, Y., Gong, H., Klugah-Brown, B., Tan, Q., Zhu, G., Hao, J., Lin, Y., Chen, K., Wang, L., Law, Z. K.

2026-07-13 1 min 149 words

BIORXIV NEUROSCIENCE

Summary: Accurate assessment of cerebral hemodynamics impairment traditionally relies on arterial metrics, yet often overlooks venous drainage and arteriovenous dynamics, thereby limiting the evaluation of ischemia-induced microvascular dysfunction. To address this limitation, we implemented a signal-averagi...

Single-nuclear RNA sequencing reveals an ATF3-independent sensory-neuron program after surgical incision

Su, P.-Y. P., Yu, J., Weinrich, J. A., Ye, F., Zhang, L., Guan, Z.

2026-07-13 1 min 360 words

BIORXIV NEUROSCIENCE

Summary: Background. Acute postoperative pain is common and often treated with opioids, but which sensory-neuron changes are responsible for the peripheral drive of pain is poorly defined. Skin incision induces activating transcription factor 3 (ATF3), the canonical marker of nerve injury, in dorsal root gan...

Longitudinal Subject Pairing in Cross-Sectional Neonatal Data Reveals Asynchronous Structural and Functional Brain Maturation

Namiranian, R., Sadeghi, M., Abrishami Moghaddam, H.

2026-07-13

1
min

272
words

BIORXIV NEUROSCIENCE

Summary: The asynchronous development of structural and functional brain networks in early childhood remains largely unexamined, primarily due to the scarcity of longitudinal neuroimaging data. Resolving this temporal dimension is critical, as it promises to reshape our understanding of structural-functional...
