New software package: ERPLAB Studio

👤 Steve Luck 📅 2024-06-12 📖 2 min 📝 449 words ERP BOOT CAMP

> **Summary:** <p class="">We are excited to announce the release of a new EEG/ERP analysis package, ERPLAB Studio. We think it’s a huge improvement over the classic EEGLAB user interface. See our cheesy <a href="https://www.youtube.com/watch?v=lIaKVQ9DD6E">...

Assistive Trajectory Planning for Lower Limb Exoskeletons: Strategies From Laboratory-Optimized Gait to Environmentally-Adaptive Locomotion Through Multimodal Parameter Awareness

📅 2025-12-30 📖 1 min 📝 182 words REVIEWS BIOMEDICAL ENGINEERING

Summary: Lower limb assistive exoskeletons (LLEs) show great potential to reduce metabolic cost, improve walking performance, and correct abnormal gait patterns. Among their core control architectures, assistive trajectory planning is key to determining system responsiveness and effectiveness under varying l...

Sequential Sampling as a Computational Principle of Episodic Memory

👤 Kerren, C., Dixit, S., Coxon, E., Nikolaev, A. R., Doeller, C. F.

📅 2026-10-14 📖 1 min 📝 209 words

BIORXIV NEUROSCIENCE

Summary: Visual perception unfolds through sequential eye movements, yet computational models of episodic memory typically assume that event representations already exist. Here, we propose that sequential gaze sampling does not simply supply memory with visual information, but contributes to the construction...

Human Hippocampal Theta-Gamma Phase-Amplitude Coupling Signals the Distance to Remembered Goals

👤 Huang, Z., Goumas, P., Bisby, J. A., Rodionov, R., Diehl, B., McEvoy, A. W., Walker, M. C., Vivekananda, U., Burgess, N., Bush, D.

📅 2026-10-14 📖 1 min 📝 217 words

BIORXIV NEUROSCIENCE

Summary: In mammals, flexible navigation is believed to rely on a cognitive map of known locations supported by the hippocampus and surrounding medial temporal lobe structures. Hippocampal place cells typically exhibit spatial firing fields within a given environment. Moreover, their firing is modulated by t...

The Role of Locus Coeruleus and Substantia Nigra/Ventral Tegmental Area activity in Reward and Salience Processing: A High-Resolution fMRI Study

👤 Hall, J. M., Kukkonen, N., Prinea, E., Schomaker, J., Krebs, R. M.

📅 2026-10-14 📖 1 min

📝 205 words

BIORXIV NEUROSCIENCE

Summary: Dopaminergic neurons in the substantia nigra/ventral tegmental area (SN/VTA) are classically associated with reward processing, whereas noradrenergic neurons in the locus coeruleus (LC) have been shown to support salience processing more broadly. However, rewarding stimuli are also inherently salien...

Neural abstraction of evidence accumulation enables flexible multidimensional perceptual decisions

👤 Benjamin, L., Drevet, J., Wyart, V.

📅 2026-10-14 📖 1 min 📝 148 words

BIORXIV NEUROSCIENCE

Summary: Human perceptual decisions adapt to rich and changing contexts but are typically tested under impoverished conditions. To probe this flexibility, we examined decisions requiring both the selection and the combination of multiple sensory features across sequences of objects. Here we show that human d...

Independently tunable subcortical oscillators enable prefrontal control of cortical coupling

Mozaffarilegha, M., Kolaxi, A., Nikoletopoulou, V., Ito, H. T.

2026-10-14 1 min 157 words

BIORXIV NEUROSCIENCE

Summary: Oscillatory coherence between brain regions varies flexibly with behavioral demands, yet the circuit mechanism underlying this control remains unclear. Theta rhythm, which coordinates prefrontal-hippocampal activity, is classically attributed to a pacemaker in the medial septum (MS), with the supram...

A gαq signaling pathway in dopaminergic neurons suppresses memory

Martinez-Cervantes, J. C., Shah, P., Cervantes Sandoval, I.

2026-10-14 1 min 157 words

BIORXIV NEUROSCIENCE

Summary: Which experiences persist as memories is a fundamental question in neurobiology. The balance between memory persistence and suppression is thought to be optimal for an organism to adapt to the ever-changing environment. Memory suppression is a process by which the brain limits the strength and expre...

Nicotinic control of dopamine release shapes striatal output and engages adaptive action selection.

Guven, E. B., Kocaturk, S., Shiflett, M., Assous, M.

2026-10-14 1 min 198 words

BIORXIV NEUROSCIENCE

Summary: Acetylcholine and dopamine significantly modulate striatal circuits and are essential for reward learning and action selection. Cholinergic interneurons can locally trigger dopamine release through beta2-containing nicotinic acetylcholine receptors expressed on dopamine axons1-3. However, the causal...

Differential subcortical-cortical circuit reorganization in autism and ADHD

Zhou, G., Xie, K., Ngo, A., Ding, R., Cabalo, D. G., Wang, Y., Smith, M., Nakamura, M., Royer, J., Serediuc, N., Toussaint, P. J., Mottron, L., Martino, A. D., Milham, M. P., Hong, S.-J., Evans, A. C., Bernhardt, B. C.

2026-10-14 1 min 193 words

BIORXIV NEUROSCIENCE

Summary: Autism spectrum disorder (ASD) and attention-deficit/hyperactivity disorder (ADHD) often co-occur and share symptoms as well as genetic risk factors. While subcortical-cortical networks have been implicated in both conditions, particularly involving thalamic and striatal circuits, patterns of shared...

Biologically inspired alignment reveals distributed and directionally asymmetric correspondence between rat and human cortices

Dong, X., Luo, Q., Cai, A., Jin, Z., Mu, C., Wang, F., Shan, H.

2026-10-14 1 min 148 words

BIORXIV NEUROSCIENCE

Summary: Rodent models enable causal interrogation of brain circuits, but translating their systems-level organization to humans requires correspondence beyond one-to-one anatomical homology. Guided by the view that cortical areas are characterized by their relationships within distributed functional network...

LightSuite: scalable atlas registration and cell detection across the central nervous system

Karamanlis, D., Xie, Y., Foucher, C. G., Alappat, M., Masood, A., Dimitropoulou, I., Pivron, L. A. F., Martinez de Paz, J. M., Mace, E., Gaspari, S., El-Boustani, S.

2026-10-14 1 min 134 words

BIORXIV NEUROSCIENCE

Summary: Deciphering brain-wide circuits requires large animal cohorts, yet computational bottlenecks in atlas registration and whole-volume cell detection reduce precision, reproducibility, and sample yield. We present LightSuite, an open-source framework enabling scalable, multimodal registration and cellu...

Deciphering auditory neuroprogenitor stemness for large-scale neuronal screening

Rousset, F., Pepe, L., Sarhadi, M., Lemeille, S., Sgroi, S., Oberhauser, L., Daskalou, D., Ilmjarv, S., Braun, S., Senn, P.

2026-10-13 1 min 228 words BIORXIV NEUROSCIENCE

Summary: Sensorineural hearing loss can arise from damage to sensory hair cells, auditory neurons or their synaptic connections, with auditory neuropathy and cochlear synaptopathy highlighting the importance of neural integrity for hearing. The mammalian cochlea has limited capacity to regenerate lost audito...

A foundation model for brain organoid network dynamics uncovers intrinsic computation and convergent disease phenotypes

👤 Schweiger, H. E., Robbins, A., Hernandez, S., Moreno-Ochando, A., Cline, I., Doganyigit, K., Mouzaya, M., Hussain, K., Pang, Z. P., Duan, J., Salama, S. R., Pollen, A. A., Bhaduri, A., Haussler, D., Teodorescu, M., Mostajo-Radji, M. A.

📅 2026-10-13 📖 1 min 📝 135 words BIORXIV NEUROSCIENCE

Summary: Brain organoids develop self-organizing neural networks that can be used to model neurodevelopment and disease. Here we introduce PULSE, a foundation model developed using over 900 hours of high-density microelectrode array recordings of in vitro and ex vivo neural tissue. We show that this single m...

Absolute pitch: A literature review of underlying factors, with special regard to music pedagogy.

📅 2023-07-10 📖 1 min 📝 202 words PSYCHOMUSICOLOGY

Summary: Absolute pitch (AP) is a fairly rare and special phenomenon that has relevance for musicology, psychology, genetics, and neuroscience. AP possessors are able to identify the pitch of an isolated sound or to produce that sound without a reference point. The authors' aim is to review the literature on...

A human CHRNA6 3' UTR variant alters the molecular environment and microRNA engagement of the adolescent VTA without changing Chrna6 transcript abundance

👤 Hajy Heydary, Y., Castro, E. M., Gurholt, K. S., Le, N. N., Leslie, F. M., Lotfipour, S.

📅 2026-10-11

📖 1 min 📝 236 words BIORXIV NEUROSCIENCE

Summary: A single nucleotide polymorphism (rs2304297) in the 3' untranslated region (UTR) of CHRNA6, encoding the alpha6 nicotinic acetylcholine receptor subunit, is associated with adolescent smoking behavior. Humanized rats carrying the 'C' or 'G' allele show sex- and genotype-dependent responses to adoles...

APOE4 reduction in vascular-associated fibroblasts decreases cerebral amyloid angiopathy and associated vascular dysfunction

👤 Saadi, F., Cho, Y., Katritch, I. V., Lugo, B., Wu, Y., Smyth, L. C. D., Bosch, M., Telfer, K. A., Hyrc, K., Parhizkar, S., Bao, X., Nambiar, A., Zinselmeye, B. H., Hu, S., Kipnis, J., Randolph, G. J., Ulrich, J. D., Holtzman, D. M.

📅 2026-10-08 📖 1 min 📝 239 words BIORXIV NEUROSCIENCE

Summary: Cerebral amyloid angiopathy (CAA), characterized by cerebrovascular amyloid deposition, is strongly associated with Alzheimers disease, ischemic injury, and lobar hemorrhages. APOE4 is the strongest known genetic risk factor for CAA, yet the cellular sources of APOE4 that drive pathogenic vascular a...

Thalamocortical credit routing from the basal ganglia and cerebellum: anatomical constraints and circuit principles

Tanno, S., Morishima, M., Fujita, K., Kato, S., Kobayashi, K., Kawaguchi, Y., Isomura, Y., Hira, R.

2026-10-08 1 min 220 words BIORXIV NEUROSCIENCE

Summary: Animals learn to select actions that maximize reward in complex environments. A central challenge in this process is credit routing: behavioral outcomes must be routed back to the neural populations that contributed to generating the relevant actions. One possible route is through thalamocortical pa...

Transcranial Focused Ultrasound: A Transformative Tool for Intracranial Ablation, Drug Delivery, and Neuromodulation

📅 2025-11-11 📖 1 min 📝 136 words REVIEWS BIOMEDICAL ENGINEERING

Summary: Transcranial focused ultrasound (tFUS) is an emerging neuromodulation and therapeutic technology offering noninvasive, submillimeter precision for targeting deep brain structures. Unlike transcranial magnetic stimulation (TMS) and transcranial electric stimulation (tES), which are limited by depth-f...

Time-course profiling of behavioral phenotypes and Ywhah/ERK signaling expression within the vestibular region of the brainstem during motion sickness habituation

Zhanguo Jin 2026-10-07 1 min 240 words FRONTIERS NEUROSCIENCE

Summary: Motion sickness habituation represents a core neuroplastic model for investigating vestibular disorder adaptation, yet its brain-region-specific temporal molecular mechanisms remain poorly defined. Here, we adopted multi-brain-region proteomic screening combined with time-series molecular validation...

Integrated transcriptomic and proteomic profiling reveals C3-associated hippocampal neuroimmune remodeling in sodium bicarbonate-treated sepsis-associated encephalopathy

Zhiming Zhang 2026-10-07 1 min 267 words FRONTIERS NEUROSCIENCE

Summary: BackgroundSepsis-associated encephalopathy (SAE) is a neurological complication of sepsis characterized by cognitive impairment and persistent brain dysfunction. Although neuroinflammation and glial activation contribute to SAE pathogenesis, the molecular alterations underlying hippocampal neuroimmu...

Regional tau burden tracks with lower microglial HLA class II transcription in the human brain

Peng Cheng 2026-10-07 1 min 330 words FRONTIERS NEUROSCIENCE

Summary: BackgroundHuman leukocyte antigen class II (HLA-II) genes mark several microglial states in Alzheimer’s disease, but it remains unclear how their average transcription relates to tau measured in the same brain region.MethodsWe used a locked 13-gene HLA-II panel selected by biological function, cross...

Orexin-A and Periosteal Pressure Sensitivity during acute mental and physical stress: a randomized cross-over study

👤 Katrine Qvortrup 📅 2026-10-07 📖 1 min 📝 315 words FRONTIERS NEUROSCIENCE

> **Summary:** BackgroundObjective physiological markers reflecting central autonomic regulation remain limited. The orexin (hypocretin) system, localized in the lateral hypothalamus, integrates arousal, metabolic state, cardiovascular control, homeostatic control, and stress responsiveness. Periosteal Pressure Se...
